This book *Mind Body and Digital Brains* focuses on both theoretical and empirical issues and joins contributions from different disciplines concepts and sensibilities bringing together scholars from fields that at first glance may appear different Neuroscience and Cognitive Neuroscience Robotics Computer Science Deep Learning and Information Processing Systems Education Philosophy Law and Psychology All these research fields are held together by the very object to be discussed a broad articulate and polyphonic reflection on the status of theories and fields of application of Digital Technologies and Artificial Intelligence seen from the perspective of the digital mind digital body and digital brain Scientific and humanistic issues will be considered through an interdisciplinary point of view with the purpose of deepening emerging trends about various disciplines This book offers a framework for different perspectives and at the same time a platform for discussion aimed not only at experts but also at a non specialist public interested in the digital revolution The digital revolution is emerging from the intertwining of ethical philosophical and technological aspects which concern several general issues as cooperation law and environment but also specialized as cybersecurity or algorithmic citizenship More questions arise concerning which opportunities and risks are associated with the new scenarios what idea of humanity is emerging from the increasingly widespread use of Artificial Intelligence technologies and what idea of integrated science should we promote to accompany the ongoing transformations

Transmodern Literatures in the 21st Century Claus-Peter Neumann, Pilar Royo-Grasa, 2025-09-30 *Transmodern Literatures in the 21st Century* Of f Limits offers an in depth examination of how transmodern literatures in English over the last two decades have addressed the phenomenon of the limit The 14 chapters that make up the volume examine how geographical racial ethnical sociocultural generical ontological epistemological and other limits are articulated transgressed and reconfigured in recent narratives by authors writing in a wide variety of transmodern trends such as Afro and Africanfuturism Young Adult feminist science fiction food fiction air travel fiction the networked novel and future narratives amongst others They thereby expose and challenge hierarchised binary dichotomies

as Euro and Anthropocentric exclusionary discursive constructs that have kept non hegemonic voices off limits To counter the detrimental effects of the neoliberal grand narrative of globalisation the chapters as well as the narratives of the limit they analyse emphasise an urgent need for inclusiveness relationality and communality

Experiments in Practice Astrid Schwarz,2015-10-06 Traditionally experimentation has been understood as an activity performed within the laboratory but in the twenty first century this view is being challenged Schwarz uses ecological and environmental case studies to show how scientific experiments can transcend the laboratory

Formal Ontology in Information Systems Achille C. Varzi,Laure Vieu,2004 Just as ontology developed over the centuries as part of philosophy so in recent years ontology has become intertwined with the development of the information sciences Researchers in such areas as artificial intelligence formal and computational linguistics biomedical informatics conceptual modeling knowledge engineering and information retrieval have come to realize that a solid foundation for their research calls for serious work in ontology understood as a general theory of the types of entities and relations that make up their respective domains of inquiry In all these areas attention has started to focus on the content of information rather than on just the formats and languages in terms of which information is represented A clear example of this development is provided by the many initiatives growing up around the project of the Semantic Web And as the need for integrating research in these different fields arises so does the realization that strong principles for building well founded ontologies might provide significant advantages over ad hoc case based solutions The tools of Formal Ontology address precisely these needs but a real effort is required in order to apply such philosophical tools to the domain of Information Systems Reciprocally research in the information science raises specific ontological questions which call for further philosophical investigations

Eco-Cognitive Computationalism Lorenzo Magnani,2021-08-30 This book mainly focuses on the widely distributed nature of computational tools models and methods ultimately related to the current importance of computational machines as mediators of cognition An entirely new eco cognitive approach to computation is offered to underline the question of the overwhelming cognitive domestication of ignorant entities which is persistently at work in our current societies Eco cognitive computationalism does not aim at furnishing an ultimate and static definition of the concepts of information cognition and computation instead it intends by respecting their historical and dynamical character to propose an intellectual framework that depicts how we can understand their forms of emergence and the modification of their meanings also dealing with impressive unconventional non digital cases The new proposed perspective also leads to a clear description of the divergence between weak and strong levels of creative abductive hypothetical cognition weak accomplishments are related to locked abductive strategies typical of computational machines and deep creativity is instead related to unlocked abductive strategies which characterize human cognizers who benefit from the so called eco cognitive openness
