Explanation, Laws, and Causation Wei Wang, 2017-04-21 Scientific explanation laws of nature and causation are crucial and frontier issues in the philosophy of science This book studies the complex relationship between the three concepts aiming to achieve a holistic synthesis about explanation laws causation By reviewing Hempel's scientific explanation models and Salmon's three conceptions the epistemic modal and ontic conception the book suggests that laws are essential to explanation and that our understanding of laws will help solve the problems of the latter

Concerning the nature of laws this book tackles both the problems of regularity approach and necessitarian approach It also proposes that the ontological order of explanation should be from events or processes to causation then to regularity laws and finally to science system but the epistemological order should be from science system to laws to explanation and causation In addition this book examines the legitimacy of *ceteris paribus* laws the connection between explanation and reduction the relation between explanation and interpretation and some other issues closely related to explanation laws causation This book will attract scholars and students of philosophy of science natural sciences social sciences etc
