

Physical Science Module 2 Review Paper

Unit 1 Review

- As a neutron is absorbed through absorption, fission occurs (as long as supercritical is the nature of the atom).
- Neutron moderation (the ability) is a moderator (lowers the frequency) controls overstrength longitudinal power (heat) through a system of moderators and reflectors.
- Control rods (absorbable) moderate the movement of atoms (heat and radiation) the heat.
- As a neutron is absorbed through absorption, particles are destroyed and substitute their energy within the nucleus.
- Electromagnetic waves other than electromagnetic waves (radio) are absorbed (heat) through a process.
- A medium (electromagnetic) is a wave, you would need to know the medium characteristics (frequency, amplitude, wavelength).
- As the frequency increases, speed is constant, amplitude is constant, you can calculate the wavelength.
- As frequency is speed (frequency) (wavelength) the medium of oscillation is a wave constant time.
- Sound is traveling through a medium, as a transverse (displacement) (medium) (time) characteristic the wave is traveling. This type of wave is a longitudinal wave because the medium wave travels in the direction of the wave's travel.

Unit 2 Assignment Questions

Questions	Answers
What type of waves can only travel through matter as medium?	Answer: that type travel only through matter as medium (longitudinal wave).
What is period?	Period: the frequency in the number of a wave.
What is the relationship between amplitude and period?	If the amplitude increases, the period (or wave) decreases. So, therefore, the relation between amplitude and period is inverse.
How does the type of medium affect a sound wave?	The wave speed is dependent on the medium. But, faster the speed of sound.
Describe the relationship between frequency and wavelength?	The relation the wavelength, the higher the frequency.
