Sanwal,2015-11-05 This text traces the evolution of sustainable development and climate change from the time it emerged in international consultations and agreements The three sections of the book focusing on the framework climate change and sustainable development seek to cover the essentials of the politics of natural resource usage at the global level The book explores the evolution of sustainable development and climate change within the framework of the United Nations and the way the concept has been defined through intergovernmental meetings agreements and consensus within the multilateral system It also explores the best ways of reducing the risk to the planet while enabling societies to pursue sustainable development paths The challenges call for a transformation of social systems to facilitate a broadly acceptable change The book also explores the adoption of low carbon models different from the high carbon socio technical systems and related social practices General Aptitude Compulsory Solved Papers YCT Expert Team , 2023 24 NTA CSIR NET JRF PART A

General Aptitude Compulsory Solved Papers *Climate Smart Agriculture* Leslie Lipper,Nancy McCarthy,David Zilberman,Solomon Asfaw,Giacomo Branca,2017-10-20 This book is open access under a CC BY NC SA 3 0 IGO license The book uses an economic lens to identify the main features of climate smart agriculture CSA its likely impact and the challenges associated with its implementation Drawing upon theory and concepts from agricultural development institutional and resource economics this book expands and formalizes the conceptual foundations of CSA Focusing on the adaptation resilience dimension of CSA the text embraces a mixture of conceptual analyses including theory empirical and policy

analysis and case studies to look at adaptation and resilience through three possible avenues ex ante reduction of vulnerability increasing adaptive capacity and ex post risk coping The book is divided into three sections The first section provides conceptual framing giving an overview of the CSA concept and grounding it in core economic principles The second section is devoted to a set of case studies illustrating the economic basis of CSA in terms of reducing vulnerability increasing adaptive capacity and ex post risk coping The final section addresses policy issues related to climate change Providing information on this new and important field in an approachable way this book helps make sense of CSA and fills intellectual and policy gaps by defining the concept and placing it within an economic decision making framework This book will be of interest to agricultural environmental and natural resource economists development economists and scholars of development studies climate change and agriculture It will also appeal to policy makers development practitioners and members of governmental and non governmental organizations interested in agriculture food security and climate change

Consciousness and Being Robert C. Trundle, 2019-02-14 This book is of vital interest to anyone who yearns to know how science theology ethics art and politics do really afford objective truths Not only that but how these truths in seemingly clashing areas are interrelated by common sense and rooted in our incontrovertible consciousness of Being itself Being itself as the basis for truth is defended against truth denying modern philosophers who having headed in the wrong direction with tragic costs of murderous ideologies have completely misunderstood the simple origin of truth in the realist tradition of Aristotle Aquinas Etienne Gilson and others Their profoundness is not bamboozled by the covert and corrupting sophism of today's teachings Anyone interested in surmounting these teachings that include political correctness and a false divide of fact from value which paralyze the very modern ethics that helped to create them should read this book The book reveals how ethics art and politics can be as true as the sciences that inform them

Sustainability in Public Procurement, Corporate Law and Higher Education Lela Melon, 2023-12-12 Contemporary changes in law and policy at the global level to efficiently answer to environmental and social issues correspond to the traditional approach of limiting the regulatory and policy changes to a singular field or discipline tackling the inherent unsustainability of corporate laws or incentivising the offering of sustainable finance to stimulate the transition towards sustainable practices This book provides a new viewpoint and approach of simultaneously regulating seemingly non connected fields in order to provide a fertile ground for a truly organic change towards sustainable outcomes It addresses diverse questions of sustainable transition of the three specific fields to support sustainable practices in public procurement private market transaction and in educating future business leaders and legal experts by incorporating sustainable concerns as the underlying guiding principles of their conduct It translates scientific findings into a practical format that can be used by diverse stakeholders searching for information and solutions in their respective professional fields The underlying assumption is that a simultaneous action in the three respective fields of public procurement corporate law and higher education brings about more coherent and interconnected results that incentivise further action and changes towards sustainable practices The book furthers the idea of policy coherence by building upon the findings in the field of public procurement corporate law and practice and higher education curricula By identifying the barriers in the three respective fields for sustainable action and proposing solutions for either eliminating or minimising those barriers at the EU level the book calls for further changes in the respective fields as well as for considering the spillover effects of these policies on other fields

Lecture Notes on Resource and Environmental Economics Anthony C. Fisher, 2020-06-26 This book based on lectures on natural and environmental resource economics offers a nontechnical exposition of the modern theory of sustainability in the presence of resource scarcity It applies an alternative take on environmental economics focusing on the economics of the natural environment including development computation and potential empirical importance of the concept of option value as opposed to the standard treatment of the economics of pollution control The approach throughout is primarily conceptual and theoretical though empirical estimation and results are sometimes noted Mathematics ranging from elementary calculus to more formal dynamic optimization is used especially in the early chapters on the optimal management of exhaustible and renewable resources but results are always given an economic interpretation Diagrams and numerical examples are also used extensively The first chapter introduces the classical economists as the first resource economists in their discussion of the implications of a limited natural resource base agricultural land for the evolution of the wider economy A later chapter returns to the same concerns along with others stimulated by the energy and environmental crises of the 1970s and beyond One section considers alternative measures of resource scarcity and empirical findings on their behavior over time Another introduces the modern concept of sustainability

with an intuitive development of the analytics A chapter on the dynamics of environmental management motivates the concept of option value shows how to compute it then demonstrates its importance in an illustrative empirical example The closing chapter on climate change first projects future changes and potential catastrophic impacts then discusses the policy relevance of both option value and discounting for the very long run This book is intended for resource and environmental economists and can be read by interested graduate and advanced undergraduate students in the field as well

Climate Change and Groundwater: Planning and Adaptations for a Changing and Uncertain Future Robert Maliva, 2021-01-26 This book attempts to bridge the gap between the climate change research and decision making communities by exploring the impacts of climate change on groundwater

from a more applied perspective Global climate change will impact groundwater demands quality and available supplies and rising sea level may cause water tables to rise inundating low lying coastal areas Groundwater will increasingly be needed to perform a stabilization role in mitigating fluctuations in the supply of surface waters serving as a buffer against droughts Climate change has become a frequent subject in the mass media and the academic literature on the subject is now enormous An impediment to climate change adaptation with respect to water is a poor link between the climate change research community and the actual decision makers responsible for water supply planning Key issues explored are methods for evaluating potential impacts on climate change on local groundwater systems the adaptation of decision making process and how climate change adaptation can be mainstreamed into the water supply planning
