On Canvas Stephen Hackney, 2020-02-11 The first truly comprehensive analysis of the history practice and conservation of painting on canvas Throughout its long history in Western art canvas has played an influential role in the creative process From the Renaissance development of oil painting on canvas to the present day through Impressionism Abstract Expressionism and other art historical movements the use of canvas has enhanced the scale of painting freedom of brushwork and spontaneity in technique This book recounts some of that rich history in relation to corresponding developments in conservation practice Rather than concentrating on the familiar concerns of cleaning and varnish removal this volume considers the preservation of a painting's structure By focusing on recent studies on the fundamental nature of canvas and its mechanisms of deterioration the book explains new approaches to the conservation of both contemporary and historical art including reversible passive and preventive treatments particularly with respect to lining Written by Stephen Hackney a conservation practitioner and leader in conservation research *On Canvas* is the first book to take a comprehensive look at this important subject and is destined to become an invaluable resource for the field

Preventing Chemical Weapons Michael Crowley, Malcolm Dando, Lijun Shang, 2018-08-20 The life and chemical sciences are in the midst of a period of rapid and revolutionary transformation that will undoubtedly bring societal benefits but also have potentially malign applications notably in the development of chemical weapons Such concerns are exacerbated by the unstable international security environment and the changing nature of armed conflict which could fuel a desire by certain States to retain and use existing chemical weapons as well as increase State interest in creating new weapons whilst a broader range of actors may seek to employ diverse toxic chemicals as improvised weapons Stark indications of the multi faceted dangers we face can be seen in the chemical weapons attacks against civilians and combatants in Iraq and Syria and also in more targeted chemical assassination operations in Malaysia and the UK Using a multi disciplinary approach and drawing upon an international group of experts this book analyses current and likely near future advances in relevant science and technology assessing the risks of their misuse The book examines the current capabilities limitations and failures of the existing international arms control and disarmament architecture notably the Chemical Weapons Convention in preventing the development and use of chemical weapons Through the employment of a novel Holistic Arms Control methodology the authors also look beyond the bounds of such treaties to explore the full range of international law international agreements and regulatory mechanisms potentially applicable to weapons employing toxic chemical agents in order to develop recommendations for more effective routes to combat their proliferation and misuse A particular emphasis is given to the roles that chemical and life scientists health professionals and wider informed activist civil society can play in protecting the prohibition against poison and chemical weapons and in working with States to build

effective and responsive measures to ensure that the rapid scientific and technological advances are safeguarded from hostile use and are instead employed for the benefit of us all
