Storey, Karen K. Tanino, 2012 Cold adaptation is a much neglected field in the minds of climate change researchers and policy makers However increasing fluctuations in temperature means that the risk of cold stress will pose an increasing threat to both wild and cultivated plants and animals with frost injury expected to cause devastating damage to crops on an increasingly large scale Conversely species already adapted to cold seasonality are

declining in numbers and threatening both wildlife and human food sources Thus improving shared knowledge of the biological mechanisms of cold adaptation in plants and animals will help prevent major losses of crops and genetic resources in the future This book is the first to focus on the mechanistic similarities between species in their responses to cold in a multi organism approach that addresses the challenges and impacts of climate change on cold adaptation in micro organisms including pathogens invertebrates economically and scientifically important plants and vertebrates in both terrestrial and marine environments The book concludes with a focus on the interactions between organisms exploring common mechanisms in cold adaptation and dormancy **The Farmers' Advocate and Home Magazine** ,1910 **Books Out-of-print** ,1986
