Resonance: Applications In Physical Science Michael Mark Woolfson, 2014-11-28 This book explores a large number of resonance effects that occur both in everyday life and in scientific contexts It is a topic that provides a cross link between many branches of science and shows how a single scientific principle can manifest itself in many apparently disparate ways Resonance covers fields as diverse as civil engineering in relation to the safety of bridges the quality of sound from musical instruments the behaviour of electrical circuits lasers the orbits of solar system bodies the scattering of X rays from atoms and the exploration of the structures of molecules atoms and nuclei The essential mathematics included should be accessible to any science undergraduate no matter the discipline of their study Problems and solutions are provided for every chapter to help reinforce understanding of the material

The Case for Pandora James Essig, Steve McCarter, 2016-12-19 This book is about building craft for space travel space travel that is not in the distant

future but in the immediate future There is no question that we have the technology to build and power large craft capable of traversing the galaxy and for now this book will focus on achieving the goal of intragalactic travel We will describe various methods of power generation and propulsion delineate the materials and technology for construction discuss the building of the spacecraft from the outside in and show what is required to sustain life on the craft for extended periods of time While we will go into some detail on each of these pointing out advantages and disadvantages to components and methods this is not nor is it intended to be a highly technical book to be used by specialists Rather it is intended to inform the general readership about what is possible and perhaps what is not in building and operating spacecraft for long distance and long duration travel with current and available means

Journeys Through The Precision Frontier: Amplitudes For Colliders (Tasi 2014) - Proceedings Of The 2014 Theoretical Advanced Study Institute In Elementary Particle Physics Lance Dixon, Frank Petriello, 2015-09-17 This volume is a compilation of the lectures at TASI 2014 The coverage focuses on modern calculational

techniques for scattering amplitudes and on the phenomenology of QCD in hadronic collisions Introductions to flavor physics dark matter and physics beyond the Standard Model are also provided The lectures are accessible to graduate students at the initial stages of their research careers *Karl Popper, Science and Enlightenment* Nicholas Maxwell, 2017-09-26 Here is an idea that just might save the world It is that science properly understood provides us with the methodological key to the salvation of humanity A version of this idea can be found in the works of Karl Popper Famously Popper argued that science cannot verify theories but can only refute them and this is how science makes progress Scientists are forced to think up something better and it is this according to Popper that drives science forward But Nicholas Maxwell finds a flaw in this line of argument Physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available This means that science makes a questionable assumption about the universe namely that all disunified theories are false Without some such presupposition as this the whole empirical method of science breaks down By proposing a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world

L. Carey, V. Gayral, A. Rennie, F. A. Sukochev, 2014-08-12 Spectral triples for nonunital algebras model locally compact spaces in noncommutative geometry In the present text the authors prove the local index formula for spectral triples over nonunital algebras without the assumption of local units in our algebra This formula has been successfully used to calculate index pairings in numerous noncommutative examples The absence of any other effective method of investigating index problems in geometries that are genuinely noncommutative particularly in the nonunital situation was a primary motivation for this study and the authors illustrate this point with two examples in the text In order to understand what is new in their approach in the commutative setting the authors prove an analogue of the Gromov Lawson relative index formula for Dirac type operators for even dimensional manifolds with bounded geometry without invoking compact supports For odd dimensional manifolds their index formula appears to be completely new

Transformational Infrastructure for Development of a Wellbeing Economy in Africa Desta Mebratu, Mark Swilling, 2019-11-20 African countries face unprecedented challenges of defining a future development pathway in a resource and carbon constrained world This book addresses this challenge with special reference to the set of infrastructure that most African countries require to meet the sustainable development goals and fulfil the aspirations of Agenda 2063 Infrastructure

is a key factor that determines how resource and energy flow and transform through socio economic systems Decisions made today by African countries on their infrastructural configuration will determine the inclusivity resource intensity and climate resilience of their development pathways for decades to come This book is a product of a two year research conducted by a group of African scholars who have an extensive academic and practical experience on the development of key infrastructure sectors in Africa

Poincare-Einstein Holography for Forms via Conformal Geometry in the Bulk A. Rod Gover, Emanuele Latini, Andrew Waldron, 2015-04-09 The authors study higher form Proca equations on Einstein manifolds with boundary data along conformal infinity They solve these Laplace type boundary problems formally and to all orders by constructing an operator which projects arbitrary forms to solutions They also develop a product formula for solving these asymptotic problems in general The central tools of their approach are i the conformal geometry of differential forms and the associated exterior tractor calculus and ii a generalised notion of scale which encodes the connection between the underlying geometry and its boundary The latter also controls the breaking of conformal invariance in a very strict way by coupling conformally invariant equations to the scale tractor associated with the generalised scale

Multivariate Applications in the Social Sciences N. Hirschberg, L. G. Humphreys, 2014-01-14 First published in 1982 Textbooks in multivariate methods proliferate but there are few books

concerned with their application Experimental psychology and its associated method of statistical data analysis analysis of variance has tended to dominate psychological thinking even in such areas as social and clinical psychology two areas that are particularly ill suited to simple analysis of variance statistical models The recent emphasis of clinical and social psychology on applied research relevant to social problems requires that more attention be paid to multivariate methods and appropriate research designs this book illustrates and examines the multivariate approach alone this does not imply that a multivariate approach combined with an experimental approach would not in the long run provide the best overall research design The present collection of multivariate applications introduces some of the kinds of research problem that can be tackled by means of multivariate statistical analysis
