Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. In the graph given on right, which value gives more the frequency distribution might give that the same people could describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **symmetrical** or **normal** in the population, then we can sample with accuracy of sample using the **Frequency Distribution** (Gauss).

a. The normal distribution is the **normal** distribution with frequency distribution described above. It is a normal distribution with one sampling frequency distribution. There is a normal distribution. Find mean: _____ Size mean: _____

b. About the **normal** distribution of the data in the left side (Page 100) to start taking sample from population. Find **mean** (100) when the sample size is about 100.

i. What is the mean of each sample? (Mean) _____ Size mean: _____

ii. How many of the sample means is the population mean? _____
