Materials used in the transportation and distribution are thin plastic (bubbles), foam (padding), paper (instruction manuals), AA batteries which is used and a mix of zinc/manganese/potassium/graphite, with the remaining balance made up of paper and plastic. The energy used more is in packaging products (mechanical), transportation through trucking, and cargo ships with fuel (chemical). The waste is shown in shipping using trucks emit carbon dioxide and impact climate change, card boxes used in packaging can be recycled but many people trash them and they end up in landfills.

USE REUSE RECYCLE

When being used, could like as is high prices, drum machines are likely not to be thrown away but rather, stored or used as another person is need of this instrument or kept for sentimental personal use. This in terms of maintenance, one would need to replace the plastic heads occasionally if they break. The energy used consists of energy to power products and access to the internet. The waste produced AA batteries can be hazardous because of the metal and chemical contents, and need to be disposed of in a specific way depending on region.

RECYCLING

When one is over the parts of a drum machine can be recycled such as the aluminum and plastic. If broken, the instruments can be used and sold for parts, since it also is a piece of technology, many of the parts can still be used for other purposes. The type of energy used in recycling is thermal energy being used in general plastic recycling, bubble art of recycled material to build back to make something. Waste produced included plastic can be recycled but many end up in landfills and cause pollution. Rubber is harder to recycle, and can have negative impacts on the environment when they end up in landfills.
