Landforms

Natural features of the Earth's surface

Landforms are found all over the world. They are natural features on the Earth's surface. There are many kinds of landforms. There are even landforms under the water! Some types of landforms are beaches, canyons, coasts, deserts, hills, islands, lakes, mountains, oceans, plateaus, rivers, valleys, volcanoes, and waterfalls.

Over time, landforms change in their appearance. This is caused by erosion. Erosion is when water, wind, and ice remove or wear down pieces of the landform.

Sometimes landforms are protected by the government in National Parks like The Grand Canyon, The Great Smoky Mountains, or Yosemite National Park. Protected means they are preserved from harm. Other times, there are landforms all around us. When you ride your bike up a hill, you are riding up a landform. If you visit the state of Hawaii, you are visiting an island which is a kind of landform. Sometimes people make landforms like lakes or hills and some landforms can't be made by people.

Landforms Britannica Educational Publishing,2011-05-01 The planet's natural dips and elevations, slopes and structures study the world's landscapes and enrich its panoramas. However, the Earth's landforms should not be viewed as anomalies in its topography; rather, they are often invaluable components of ecosystems and hold significant clues to the natural forces that fashion our environment. This comprehensive volume examines the various landforms from mountains to caves to glaciers that can be found across the globe. The processes that shape each formation are also detailed within these pages.

The second part comprises more than 40 region-specific studies to show the diversity of landscapes from high mountain relief through medium altitude forested ranges, limestone uplands and loess plateaus, lowland landscapes moulded by past ice sheets, rivers and aeolian processes to coastal sceneries. Selected examples of anthropogenically modified landscapes are also considered. Each chapter is accompanied by photographs, maps and diagrams. The volume is intended primarily for geographers and Quaternary geologists but will be also of interest to anyone interested in natural landscapes and their conservation. **Paired**
