Report:

The purpose of the Salts & Solubility Recreation is to permit understudies to investigate how distinctive salts break up in the water and how components such as temperature and concentration influence the solvency of salts. Through the reenactment, understudies can control different factors and watch the impacts on the disintegration preparation, making a difference in them getting a handle on the basic standards of solvency and arrangement.

The conclusion is that different salts have shifting degrees of solvency in water. A few salts break down promptly, whereas others have restricted solvency or may not break down at all beneath certain conditions.

The screenshot shows the PhET Salts & Solubility simulation window. The title bar reads "Salts & Solubility (1.06)". The menu bar includes "File" and "Help". The main interface has three tabs: "Table Salt", "Slightly Soluble Salts", and "Design a Salt". The "Design a Salt" tab is active. On the left, there is a 3D representation of a beaker filled with blue water. A yellow faucet is on the left side of the beaker. Above the beaker, a grey cylindrical container with holes is shown, representing a salt source. The water level is indicated by a vertical scale on the right side of the beaker, ranging from 1.0×10^{23} to 8.0×10^{23} . The water contains small green and purple particles, representing dissolved ions. On the right side of the window, there is a control panel. It has a "Salt" section with two columns: "Ions" and "Chloride". The "Ions" column has a "Dissolved" value of 24 and a "Bound" value of 0. The "Chloride" column has a "Dissolved" value of 24 and a "Bound" value of 0. The "Total" for both columns is 24. Below this, there is a "Water" section with a "Volume" of 7.125×10^{-23} liters (L). At the bottom of the control panel is a "Reset All" button. At the bottom of the simulation window, there are two buttons: a blue "Play" button and a grey "Pause" button.
