Physical Science Paper2 Grade November 2014 Memorandum:

How We Teach Science John L. Rudolph, 2019-06-01 A former Wisconsin high school science teacher makes the case that how and why we teach science matters especially now that its legitimacy is under attack Why teach science The answer to that question will determine how it is taught Yet despite the enduring belief in this country that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process Nearly all of the basic knowledge we have about the world is rock solid The science we teach in high schools in particular laws of motion the structure of the atom cell division DNA replication the universal speed limit of light is accepted as the way nature works Everyone also agrees that students and the public more generally should understand the methods used to gain this knowledge But what exactly is the scientific method Ever since the late 1800s scientists and science educators have grappled with that question Through the years they've advanced an assortment of strategies ranging from the laboratory method to the five step method to science as inquiry to no method at all How We Teach Science reveals that each strategy was influenced by the intellectual cultural and political circumstances of the time In some eras learning about

experimentation and scientific inquiry was seen to contribute to an individual's intellectual and moral improvement while in others it was viewed as a way to minimize public interference in institutional science John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and ultimately determine how science is perceived and received by the public

Helens: Revisited 35 years after the 1980 Eruption Charles M. Crisafulli, Virginia H. Dale, 2018-01-30 This book builds on existing work exploring succession disturbance ecology and the interface between geophysical and biological systems in the aftermath of the 1980 eruptions of Mount St Helens The eruption was dramatic both in the spatial extent of impacts and the range of volcanic disturbance types and intensities Complex geophysical forces created unparalleled opportunities to study initial ecological responses and long term succession processes that occur in response to a major contemporary eruption across a great diversity of ecosystems lowland to alpine forests meadows lakes streams and rivers These factors make Mount St Helens an extremely rich environment for learning about the ecology of volcanic areas and more generally about ecosystem response to major disturbance of many types including land management Lessons about ecological recovery at Mount St Helens are shaping thought about succession disturbance ecology ecosystem management and landscape ecology In the first five years after the eruption several syntheses documented the numerous intensive studies of ecological recovery The 2005 volume *Ecological Responses to the 1980 Eruption of Mount St Helens* Springer Publishing was the first ecological synthesis since 1987 of the scores of ecological studies underway in the area More than half of the world's published studies on plant and animal responses to volcanic eruptions have taken place at Mount St Helens The 25 year synthesis which generally included investigations i e data from 1980 2000 made it possible to more thoroughly analyze initial stages of ecological responses and to test the validity of early interpretations and the duration of early phenomena And 35 years after the eruption it is time for many of the scientists working in the first three decade post eruption period to pass the science baton to the next generation of scientists to work at Mount St Helens and a synthesis at this time of transfer of responsibility to a younger cohort of scientists will be an enormous asset to the continuation of work at the volcano
