

Technical Overview of Piper Alpha

Design and Operational Features

- **Structural Design:** Piper Alpha consisted of four modules separated by firewalls designed to contain outbreaks, but lacked certain safety redundancies and gas detection systems.
- **Operational Systems:** Equipped with complex piping and control systems to manage oil and gas production, the platform had interconnected safety valves which were critical during the disaster.
- **Safety Measures:** Despite having basic safety protocols, the platform's design and operational plans were not fully prepared for the type of disaster that occurred in 1988.
