However, there is a concern regarding the performance of green buildings failing to meet the expectations of clients during the operation. One of the key reasons for this is poorly commissioned HVAC systems. In this publication, we provide tools and knowhow for more efficient HVAC commissioning. It gives answers for four major questions: why commissioning is needed, how to perform proper commissioning, which key performance issues of common HVAC equipment need to be considered, and what kind of checklists are used during commissioning. It covers the entire commissioning process beginning with the owner's project requirements and commissioning design reviews. Then it explains procedures during installation and start-up of equipment followed by the functional performance testing, seasonal commissioning, and 10 months operation review. This publication is developed by Indian Society of Heating Refrigeration and Air Conditioning Engineers (ISHRAE) for Indian and Asian requirements in conjunction with the Federation of European HVAC Associations (REHVA). The process steps described in this publication are in line with all major international building standards and green building certification schemes. Note: T F does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh, and Sri Lanka. *Code of Practice for Project Management for Construction and Development* CIOB (The Chartered Institute of Building), 2014-09-15 The first edition of the Code of Practice for Project Management for Construction and Development published in 1992 was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM, and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality, and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming, and monitoring resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals, and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres. *Construction Operations Manual of Policies and Procedures 5E (PB)* Sidney M.
