This book explores these two models in detail and for the first time in a textbook the Black Litterman model for building an optimal portfolio constructed from a small number of assets developed at Goldman Sachs is thoroughly presented The model's integration of personal views and its application using Excel templates are demonstrated The book also offers innovative presentations of the Modigliani Miller model and the Consumption Based Capital Asset Pricing Model CCAPM Problems at the end of each chapter invite the reader to put the models into immediate use Fundamental Models in Financial Theory is suitable for classroom use or as a reference for finance practitioners
