

Physical Science Module 2 Review Paper

Unit 1 Waves

- How is vibration an observable through continuous, transverse waves (as in the pendulum in this motion of the water).
- Transverse waves (the velocity) is a vibration (gives the frequency) creates wave-lengths longitudinal waves travel through a series of compressions and rarefactions.
- Waves can be described by amplitude, wavelength, and speed. Each one describes the wave.
- As a wave travels through a medium, particles are displaced and return to their normal position after the wave passes.
- Electromagnetic waves differ from other types of waves because they do not need matter through a medium.
- A medium is less important if a wave, you would need to know the medium characteristics to know how the wave behaves.
- As the frequency increases speed is constant speed of the wave, you can calculate the wavelength.
- As frequency is increasing, wavelength decreases the relationship is inversely proportional.
- Speed is increasing through a medium, the medium displaces particles of matter in the same direction the wave is traveling. This type of wave is a longitudinal wave.
- Because the medium is displaced by the direction of the wave.
