Physical Science Paper 6 Marking Guide 201:

Resources in Education ,2000-10 The Goodwillie Tower and the EHP Sequence Mark Behrens,2012 The author studies the interaction between the EHP sequence and the Goodwillie tower of the identity evaluated at spheres at the prime 2 Both give rise to spectral sequences the EHP spectral sequence and the Goodwillie spectral sequence respectively which compute the unstable homotopy groups of spheres He relates the Goodwillie filtration to the P map and the Goodwillie differentials to the H map Furthermore he studies an iterated Atiyah Hirzebruch spectral sequence approach to the homotopy of the layers of the Goodwillie tower of the identity on spheres He shows that differentials in these spectral sequences give rise to differentials in the EHP spectral sequence He uses his theory to recompute the 2 primary unstable stems through the Toda range up to the 19 stem He also studies the homological behavior of the interaction between the EHP sequence and the Goodwillie tower of the identity This homological analysis involves the introduction of Dyer Lashof like operations associated to M Ching s operad structure on the derivatives of the identity These operations act on the mod 2 stable homology of the Goodwillie layers of any functor from spaces to spaces **Canadian Books in Print. Walsh,2011 It is well known that isotopic metrics of positive scalar curvature are concordant Whether or not the converse holds is an open question at least in dimensions greater than four The author shows that for a particular type of concordance constructed using the surgery techniques of Gromov and Lawson this converse holds in the case of closed simply connected manifolds of dimension at least five The Saturday Review of Politics, Literature, Science and Art ,1861 *Paperbound Books in Print* ,1984 *Axiomatic Stable Homotopy Theory* Mark Hovey,John Harold Palmieri,Neil P. k -Shapes and Branching Rules for k -Schur Functions Thomas Lam, Luc Lapointe, Jennifer Morse, Mark Shimozono, 2013-04-22 The authors give a combinatorial expansion of a Schubert homology class in the affine Grassmannian $\mathrm{Gr}_{\mathrm{SL}_k}$ into Schubert homology classes in $\mathrm{Gr}_{\mathrm{SL}_{k+1}}$ This is achieved by studying the combinatorics of a new class of partitions called k shapes which interpolates between k cores and $k+1$ cores The authors define a symmetric function for each k shape and show that they expand positively in terms of dual k Schur functions They obtain an explicit combinatorial description of the expansion of an ungraded k Schur function into $k+1$ Schur functions As a corollary they give a formula for the Schur expansion of an ungraded k Schur function The Bookseller ,1920 Official
