

Also, since center spring preload adjustment puts more or less pressure on the front of the track, it has an effect on the performance in deep snow.

ACTION	RESULT
Increasing preload	Lighter steering
	More bump absorption capability
	Better deep snow starts
	Better deep snow performance and handling
Decreasing preload	Heavier steering
	Less bump absorption capability
	Better trail handling

FIGURE 1 — RISE TIME
1. Spring preload adjuster ring
2. Spring preload adjuster
3. Spring preload adjuster

Rear Spring

Rear spring preload has an effect on comfort, ride height and load compensation.

Also, adjusting rear spring preload shifts more or less weight to the snowmobile front end. As a result, more or less weight is applied to the ski. This has an effect on performance in deep snow, steering effort and handling.

Slight suspension bottoming occurring under the worst riding conditions indicates a good choice of spring preload.

ACTION	RESULT
Increasing preload	Firmer rear suspension
	Higher rear end
	More bump absorption capability
	Heavier steering
Decreasing preload	Softer rear suspension
	Lower rear end
	Less bump absorption capability
	Lighter steering
	Better performance and handling in deep snow

Refer to the following to determine if preload is correct.

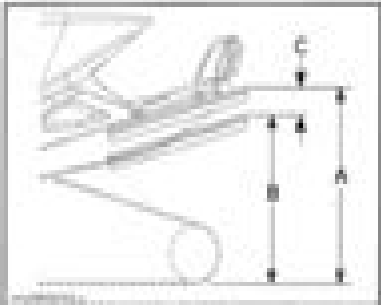

FIGURE 2 — REAR ADJUSTMENT
1. Measure from center of track to center of rear wheel.
2. Measure from center of track to center of rear wheel.
3. Measure between centers "B" and "C" and take note.

C	WHAT TO DO
More than 15mm (3/4 in to 1 in)	No adjustment required
More than 15mm (3/4 in)	Adjusted too soft. Increase preload.
Less than 15mm (3/4 in)	Adjusted too firm. Decrease preload.

NOTE: If the specification is unattainable with the original springs, refer to the applicable SPRING CHART table for other available springs.

Adjust Without Quick Adjust System

To increase spring preload using tool, always turn the left side adjustment cam in a clockwise direction, and the right side cam in a counterclockwise direction.

CAUTION Never set preload cam directly from position 5 to 1 or directly from position 1 to 5.

WARNING
Both rear spring preload must be set at the same position. Otherwise vehicle behavior may be unpredictable and suspension may become warped.

The adjustment cam have 5 different settings, 1 being the softest.

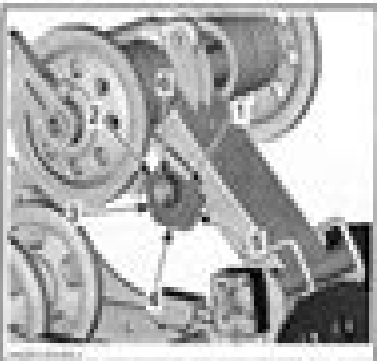

FIGURE 3 — ADJUST WITH QUICK ADJUST SYSTEM
1. Spring preload adjuster ring
2. Spring preload adjuster
3. Spring preload adjuster

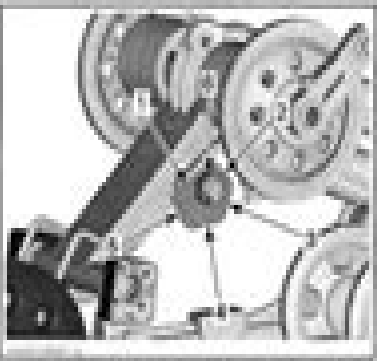

FIGURE 4 — ADJUST WITHOUT QUICK ADJUST SYSTEM
1. Spring preload adjuster ring
2. Spring preload adjuster
3. Spring preload adjuster

Adjust With Quick Adjust System

Turn the LH side knob to adjust preload accordingly.

FIGURE 5 — ADJUST WITH QUICK ADJUST SYSTEM
1. LH side knob to adjust spring preload

Rear Shock Absorber

Rear Shock Compression Damping

NOTE: Both low and high speed compression damping are adjusted simultaneously.

Low speed compression damping controls how the shock absorber reacts to a low suspension velocity below compression strokes, in most cases when riding at lower speeds.

High speed compression damping controls how the shock absorber reacts to a high suspension velocity above compression strokes, in most cases when riding at higher speeds.

TURNING	ACTION	RESULT ON BIG AND SMALL BUMPS
Clockwise	Increasing compression damping force	Firmer compression damping
Counter Clockwise	Decreasing compression damping force	Softer compression damping

Adjust Without Quick Adjust System

To adjust, turn the adjuster button located on the oil reservoir on shock clockwise to increase compression damping force and counterclockwise to decrease compression damping force.

Repair Manual 2013 Skidoo Gsx
