

2-2 TUNING

The extent of the engine tune-up is usually dependent on the time lapse since the last service. A complete tune-up of the entire engine would entail almost all of the work outlined in this manual. A logical sequence of steps will be presented in general terms. If additional information or detailed service work is required, the chapter containing the instructions will be referenced.

Each year higher compression ratios are built into modern outboard engines and the electrical systems become more complex, especially with electronic (capacitor discharge) units. Therefore, the need for reliable, authoritative, and detailed instructions becomes more critical. The information in this chapter and the referenced chapters fulfill that requirement.

2-2 TUNE-UP SEQUENCE

During a major tune-up, a definite sequence of service work should be followed to return the engine to the maximum performance desired. This type of work should not be confused with attempting to locate problem areas of "why" the engine is not performing satisfactorily. This work is classified as "trouble shooting". In many cases, these two areas will overlap, because many times a minor or major tune-up will correct the malfunction and return the system to normal operation.

Removing the spark plugs for inspection. Worn plugs are one of the major contributing factors to poor engine performance.

The following list is a suggested sequence of tasks to perform during the tune-up service work. The tasks are merely listed here. Generally procedures are given in subsequent sections of this chapter. For more detailed instructions, see the referenced chapter.

- 1- Perform a compression check of each cylinder. See Chapter 8.
- 2- Inspect the spark plugs to determine their condition. Test for adequate spark at the plug. See Chapter 5.
- 3- Start the engine in a body of water and check the water flow through the engine. See Chapter 9.
- 4- Check the gear oil in the lower unit. See Chapter 9.
- 5- Check the carburetor adjustments and the need for an overhaul. See Chapter 4.
- 6- Check the fuel pump for adequate performance and delivery. See Chapter 5.
- 7- Make a general inspection of the ignition system. See Chapter 5.
- 8- Test the starter motor and the solenoid, if so equipped. See Chapter 7.
- 9- Check the internal wiring.
- 10- Check the timing and synchronization. See Chapter 6.

"OIL LEVEL" and "OIL" are cast into the lower unit housing near the two openings. Both screws are removed and lubricant added through the lower opening.
