

Chapter 6

Study Guide

Lin Herron

6.1

What are the structures/functions of the outer, middle, and inner ear?

- Outer: External Auditory Canal, Pinna
- Middle: tympanic membrane (ear drum), malleus, incus, & stapes (hammer, anvil, & stirrups)
- Inner: oval window, cochlea

What are hair cells?

- Auditory receptors: when displaced, they excite the auditory nerve

What is the place theory? What is the frequency theory?

- Place Theory: each frequency activates hair cells at only one place along the basilar membrane
 - This theory is wrong - areas of the membrane are bound too tightly
- Frequency Theory: the basilar membrane vibrates in synchrony with sound & causes auditory nerve axons to produce action potentials at the same frequency
 - 1000Hz would be max

What is the organization of the primary auditory cortex (A1) and what types of sounds active it (tonotopic map)?

- Organization parallels the visual cortex
 - Superior - detection of where a sound is coming from
 - Anterior - changes in prolonged sounds
- Tonotopic - cells in the primary auditory cortex are more responsive to preferred tones
