Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how DNA is the perfect means of evidence in the field that the investigator has left behind at their scene.

Design the test

After sampling, you will go to the next window where you will see the sample of DNA you collected. By using a mixture of thermocycling, you can amplify the DNA from the crime scene. It is up to you to make the correct samples accordingly the PCR equipment.

See the structure of DNA inside equipment as it goes

In the window, you will see the DNA equipment at the laboratory table, illustrating the structure of DNA and the equipment used including all the correct information the experimental process, as well as all specifications of the equipment.

Identify the samples

In the PCR simulation, you will collect your samples and other correct samples from the equipment, and you will then compare the fragments for changes. This will be the results of the simulation.

Learning Objectives

In this part of the simulation, you will see reports:

1. Results: the sequence of your particular PCR product equipment and equipment.
2. Report: is this particular using the results of the PCR results in the simulation.
