Everyday Lifestyles and Sustainability Fabricio Chicca, Brenda Vale, Robert Vale, 2018-04-09 The impact of humanity on the earth overshoots the earth's bio capacity to supply humanity's needs meaning that people are living off earth's capital rather than its income. However, not all countries are equal and this book explores why apparently similar patterns of daily living can lead to larger and smaller environmental impacts. The contributors describe daily life in many different places in the world and then calculate the environmental impact of these ways of living from the perspective of ecological and carbon footprints. This leads to comparison and discussion of what living within the limits of the planet might mean. Current footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives. This book takes a bottom up approach by calculating the footprints of daily living. The purpose is to show that small changes in behaviour now could avoid some very challenging problems in the future. Offering a global perspective on the question of sustainable living, this book will be of great interest to anyone with a concern for the future as well as students and researchers in environmental studies, human geography and development studies.

Terrorism, 2013-2015 Edward Mickolus, 2016-08-22 This second comprehensive chronology of international terrorist attacks covers three eventful years during which the Islamic State supplanted al Qaeda as the most active, well-financed and well-armed terrorist group worldwide. Domestic and international incidents around the globe are covered, outlining several trends and exploding a number of media myths. The author examines the enigmas of contemporary terrorist behavior and offers indicators and predictions to watch for in the coming years.

Mountain Rescue Vehicles Cristina Berna, Eric Thomsen, 2024-04-10 Mountain search and rescue is one of the most demanding rescue activities of them all. It takes place under very severe and often dramatic conditions like high altitude snow and ice, crevasses, glaciers and avalanches. It is the stuff of real heroic acts and romance. The occasional demand for assistance but on a large scale is then often carried out by volunteers, mainly locals, due to the demand for local area and climate knowledge. This book is mainly focussed on the Alps but also visits other European mountainous areas. The special conditions have led to the development of specialized equipment and the most visible is the widespread use of helicopters which have a high degree of manoeuvrability in inaccessible terrain and ability to carry a payload. The helicopter services work together with traditional ground-based teams and sometimes move these teams to the search area. Helicopters swiftly move injured persons to a medical facility. Professional mountain rescue services are quite common near tourist resorts like ski resorts where there is a regular demand. The authors have made a similar book on American Air Rescue and the styles have both similarity and differences between the two continents. We hope the reader will enjoy our selection of photos.
