Green Grabbing: A New Appropriation of Nature James Fairhead, Melissa Leach, Ian Scoones, 2014-10-29 Across the world ecosystems are for sale Green grabbing the appropriation of land and resources for environmental ends is an emerging process of deep and growing significance A vigorous debate on land grabbing already highlights instances where green credentials are called upon to justify appropriations of land for food or fuel Yet in other cases environmental green agendas are the core drivers and goals of grabs Green grabs may be driven by biodiversity conservation biocarbon sequestration biofuels ecosystem services or ecotourism for example In some cases these agendas involve the wholesale alienation of land and in others the restructuring of rules and authority in the access use and management of resources that may have

profoundly alienating effects Green grabbing builds on well known histories of colonial and neo colonial resource alienation in the name of the environment Yet it involves novel forms of valuation commodification and markets for pieces and aspects of nature and an extraordinary new range of actors and alliances This book draws together seventeen original cases from African Asian and Latin American settings to ask To what extent and in what ways do green grabs constitute new forms of appropriation of nature What political and discursive dynamics underpin green grabs How and when do appropriations on the ground emerge out of circulations of green capital What are the implications for ecologies landscapes and livelihoods Who is gaining and who is losing How are agrarian social relations rights and authority being restructured and in whose interests This book was published as a special issue of the Journal of Peasant Studies
