Progress in Smart Materials and Structures Peter L. Reece,2007 Smart materials respond to environmental stimuli with particular changes in some variables

For that reason they are often also called responsive materials. Depending on changes in some external conditions, smart materials change either their properties, mechanical, electrical, appearance, their structure, or composition, or their functions. Mostly, smart materials are embedded in systems whose inherent properties can be favourably changed to meet performance needs. Smart materials and structures have widespread applications in:

1. Materials science: composites, ceramics, processing, science, interface, science, sensor, actuator, materials, chiral, materials, conducting, and chiral, polymers, electrochromic, materials, liquid crystals, molecular level, smart materials, biomaterials.
2. Sensing and actuation: electromagnetic, acoustic, chemical, and mechanical, sensing and actuation, single measurand, sensors, multiplexed, multimeasurand, distributed, sensors and actuators, sensor, actuator, signal processing, compatibility of sensors and actuators with conventional and advanced materials, smart sensors for materials and composites, processing.
3. Optics and electromagnetics: optical fibre, technology, active and adaptive, optical systems and components, tuneable, high dielectric, phase shifters, tuneable, surface, control.
4. Structures: smart skins for drag and turbulence control, other applications in aerospace, hydrospace, structures, civil infrastructures, transportation, vehicles, manufacturing, equipment, repairability and maintainability.
5. Control: structural, acoustic, control, distributed, control, analogue and digital, feedback, control, real time, implementation, adaptive, structure, stability, damage, implications for, structural, control.
6. Information processing: neural networks, data, processing, data, visualisation and reliability.

This book presents leading research from around the globe in this field.
