Subject Guide to Books in Print, 1991

Robotics, Vision and Control Peter Corke, 2011-11-03 The practice of robotics and computer vision both involve the application of computational algorithms to data Over the fairly recent history of the fields of robotics and computer vision a very large body of algorithms has been developed However this body of knowledge is something of a barrier for anybody entering the field or even looking to see if they want to enter the field What is the right algorithm for a particular problem and importantly How can I try it out without spending days coding and debugging it from the original research papers The author has maintained two open source MATLAB Toolboxes for more than 10 years one for robotics and one for vision The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems not trivial examples For the student the book makes the algorithms accessible the Toolbox code can be read to gain understanding and the examples illustrate how it can be used instant gratification in just a couple of lines of MATLAB code The code can also be the starting point for new work for researchers or students by writing programs based on Toolbox functions or modifying the Toolbox code itself The purpose of this book is to expand on the tutorial material provided with the toolboxes add many more examples and to weave this into a narrative that covers robotics and computer vision separately and together The author shows how complex problems can be decomposed and solved using just a few simple lines of code and hopefully to inspire up and coming researchers The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision It is written in a light but informative style it is easy to read and

absorb and includes a lot of Matlab examples and figures The book is a real walk through the fundamentals of robot kinematics dynamics and joint level control then camera models image processing feature extraction and epipolar geometry and bring it all together in a visual servo system Additional material is provided at <http://www.petercorke.com> RVC

Robot Modeling and Control Mark W. Spong, Seth Hutchinson, M. Vidyasagar, 2005-11-18 The coverage is unparalleled in both depth and breadth No other text that I have seen offers a better complete overview of modern robotic manipulation and robot control Bradley Bishop United States Naval Academy Based on the highly successful classic Robot Dynamics and Control by Spong and Vidyasagar Wiley 1989 Robot Modeling and Control offers a thoroughly up to date self contained introduction to the field The text presents basic and advanced material in a style that is at once readable and mathematically rigorous Key Features A step by step computational approach helps you derive and compute the forward kinematics inverse kinematics and Jacobians for the most common robot designs Detailed coverage of vision and visual servo control enables you to program robots to manipulate objects sensed by cameras An entire chapter on dynamics prepares you to compute the dynamics of the most common manipulator designs The most common motion planning and trajectory generation algorithms are presented in an elementary style The comprehensive treatment of motion and force control includes both basic and advanced methods The text s treatment of geometric nonlinear control is more readable than in more advanced texts Many worked examples and an extensive list of problems illustrate all aspects of the theory About the authors Mark W Spong is Donald Biggar Willett Professor of Engineering at the University of Illinois at Urbana Champaign Dr Spong is the 2005 President of the IEEE Control Systems Society and past Editor in Chief of the IEEE Transactions on Control Systems Technology Seth Hutchinson is currently a Professor at the University of Illinois in Urbana Champaign and a senior editor of the IEEE Transactions on Robotics and Automation He has published extensively on the topics of robotics and computer vision Mathukumalli Vidyasagar is currently Executive Vice President in charge of Advanced Technology at Tata Consultancy Services TCS India s largest IT firm Dr Vidyasagar was formerly the director of the Centre for Artificial Intelligence and Robotics CAIR under Government of India s Ministry of Defense
