#### The Purpose of These Questions

These are typical exam questions from Chapter 1 of the textbook. These exact questions might not be on your exam, but if you research and find the right answers to these questions, that should be good preparation for a real exam. (It's also possible that some of this material was not covered in your class.) At the moment there are **11** short answer questions and **19** multiple choice questions in this file.

#### Short Answers

1. Describe one good method for precisely specifying *what* a function must do, without indicating *how* the function accomplishes its work. Provide an example, using a small function.
2. What is a precondition? What is a postcondition?
3. It's recommended that the precondition be checked at the start of a function. What's a good approach if a function discovers that its precondition is not true?
4. Is it always possible for a function to check that its precondition is true?
5. Suppose that you accidentally call a correctly implemented function, but the precondition is false. Is the function guaranteed to halt with a nice message? Is the function allowed to erase everything on your hard drive?
6. Write the first few lines of this function so that it uses the assert facility to check its precondition:

```
void exam(int i)
// Precondition: i is not equal to 42.
...
```

7. Give a concise formula that gives the approximate number of digits in a positive integer. The integer is written in base 10.
8. Why is the order of an algorithm generally more important than the speed of the processor?
9. Convert each time formula to the best possible big-O notation. Do not include any spurious constants in your big-O answer.

**Capital Structure and Profitability** Elmar Puntaier, 2010 The present study aims to investigate to what extent capital structure has an impact on profitability and closely associated factors due to a series of bankruptcies and bail outs within the last twelve months The analysis refers to firms listed in the S P 500 index on January 2004 and evaluates their performance from 2004 to 2008 The results show strong industry specific characteristics for all factors observed i e gearing profitability liquidity investments and dividends In addition findings indicate a negative effect of higher gearing for almost all ten sectors in respect of the core variables analysed Neither the trade off nor the pecking order theory can be confirmed however more support for the former is found Due to the complexity of capital structure choice regulations have very limited effects that require the need for independent non governmental monitoring agencies to improve transparency and have the authority to intervene if managers act at the expense of public interest
