The Logic of Social Science  
James Mahoney, 2021-08-17 A groundbreaking logic based approach to bridging the scientific constructivist divide in social science The Logic of Social Science offers new principles for designing and conducting social science research James Mahoney uses set theoretic analysis to develop a fresh scientific constructivist approach that avoids essentialist biases in the production of knowledge This approach recognizes that social categories depend on collective understandings for their existence but it insists that this recognition need not hinder the use of explicit procedures for the rational assessment of truth Mahoney shows why set theoretic analysis enables scholars to avoid the pitfalls of essentialism and produce findings that rest

on a firm scientific foundation Extending his previous work and incorporating new material Mahoney presents specific tools for formulating and evaluating theories in the social sciences Chapters include discussions of models of causality procedures for testing propositions tools for conducting counterfactual and sequence analysis and principles for knowledge accumulation Equal focus is placed on theory building and explanatory tools including principles for working with general theoretical orientations and normative frameworks in scientific research Mahoney brings a novel perspective to understanding the relationship among actors social rules and social resources and he offers original ideas for the analysis of temporality critical events and path dependence Bridging the rift between those who take a scientific approach and those who take a constructivist one *The Logic of Social Science* forges an ambitious way forward for social science researchers *Focus on Earth Science* ,2001

*Statistical Methods for Food Science*  
 John A. Bower, 2009-11-09 The recording and analysis of food data are becoming increasingly sophisticated Consequently the food scientist in industry or at study faces the task of using and understanding statistical methods Statistics is often viewed as a difficult subject and is often avoided because of its complexity and a lack of specific application to the requirements of food science This situation is changing there is now much material on multivariate applications for the more advanced reader but a case exists for a univariate approach aimed at the non statistician This book provides a source text on accessible statistical procedures for the food scientist and is aimed at professionals and students in food laboratories where analytical instrumental and sensory data are gathered and require some form of summary and analysis before interpretation It is suitable for the food analyst the sensory scientist and the product developer and others who work in food related disciplines involving consumer survey investigations will also find many sections of use There is an emphasis on a hands on approach and worked examples using computer software packages and the minimum of mathematical formulae are included The book is based on the experience and practice of a scientist engaged for many years in research and teaching of analytical and sensory food science at undergraduate and post graduate level
