

Middle School Science Lab Report Guidelines

- I. **Question/Problem:** A scientific question written to tell how the factor you change (**independent variable**) affects your results.
 - ex. What is the effect of the amount of sunlight on the height of African violet plants?
 - ex. What is the relationship between the angle of a ramp and the speed of a car?
- II. **Background Research:** research about the topic. Helps you to make your hypothesis. (Optional)
- III. **Hypothesis** – a prediction of what you think the answer to the question will be (written as an "If ..., then..." statement)
 - ex. If the amount of sunlight increases, then the plant height increases.
 - or- If the the amount of sunlight increases, then the plant height decreases.
 - ex. If the angle of a ramp increases, then the speed of the the car increases.
 - or- If the angle of a ramp increases, then the speed of the car decreases.
- IV. **Materials:** a list of the supplies that you needed to test your hypothesis – needs to be specific; include **how many** and **how much**
- V. **Procedure:** step-by-step explanation of how to test the hypothesis
(**steps should be numbered and listed – not in paragraph form**)
- VI. **Observations:** the data you collect; observations (*qualitative and quantitative*) you make by hearing, smelling, tasting, feeling, and seeing (including measurements)
 - Use **tables, graphs, charts, pictures, etc.** to make data easier to read
- VII. **Conclusion:** (**written in paragraph form**)
 1. Restate your hypothesis and tell whether or not your data supports it.
 2. Answer the question to the problem using your data. Include specific data with your answer. (ex. average heights of plants in cm)
 3. Share any problems you encountered while conducting the experiment.
 4. Identify changes you could make next time.
 5. Your reflections about the experiment

Ex. If the amount of sunlight increases, then African violet plant height increases. The data supported my hypothesis. The plants that received more sunlight grew an average of 2.5cm more than the plants that received less sunlight. If this experiment was done again, we could study different types of plants. From this experiment I learned the best conditions in which to grow African Violet plants.

Science and Engineering for Grades 6-12 National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Science Investigations and Engineering Design Experiences in Grades 6-12, 2019-03-12 It is essential for today's students to learn about science and engineering in order to make sense of the world around them and participate as informed members of a democratic society The skills and ways of thinking that are developed and honed through engaging in scientific and engineering endeavors can be used to engage with evidence in making personal decisions to participate responsibly in civic life and to improve and maintain the health of the environment as well as to prepare for careers that use science and technology The majority of Americans learn most of what they know about science and engineering as middle and high school students During these years of rapid change for students knowledge attitudes and interests they can be engaged in learning science and engineering through schoolwork that piques their curiosity about the phenomena around them in ways that are relevant to their local surroundings and to their culture Many decades of education research provide strong evidence for effective practices in teaching and learning of science and engineering One of the effective practices that helps students learn is to engage in science investigation and engineering design Broad implementation of science investigation and engineering design and other evidence based practices in middle and high schools can help address present day and future national challenges including broadening access to science and engineering for communities who have traditionally been underrepresented and improving students educational and life experiences **Science and Engineering for Grades 6-12 Investigation and Design** at the Center revisits America's Lab Report Investigations in High School Science in order to consider its discussion of laboratory experiences and teacher and school readiness in an updated context It considers how to engage today's middle and high school students in doing science and engineering through an analysis of evidence and examples This report provides guidance for teachers administrators creators of instructional resources and leaders in teacher professional learning on how to support students as they make sense of phenomena gather and analyze data information construct explanations and design solutions and communicate reasoning to self and others during science investigation and engineering design It also provides guidance to help educators get started with designing implementing and assessing investigation and design **Families at Play** Sinem Siyahhan, Elisabeth Gee, 2024-07-02 How family video game play promotes intergenerational communication connection and learning Video games have a bad reputation in the mainstream media They are blamed for encouraging social isolation promoting violence and creating tensions between parents and children In this book Sinem Siyahhan and Elisabeth Gee offer another view They show that video games can be a

tool for connection not isolation creating opportunities for families to communicate and learn together Like smartphones Skype and social media games help families stay connected Siyahhan and Gee offer examples One family treats video game playing as a regular and valued activity and bonds over Halo A father tries to pass on his enthusiasm for Star Wars by playing Lego Star Wars with his young son Families express their feelings and share their experiences and understanding of the world through playing video games like The Sims Civilization and Minecraft Some video games are designed specifically to support family conversations around such real world issues and sensitive topics as bullying and peer pressure Siyahhan and Gee draw on a decade of research to look at how learning and teaching take place when families play video games together With video games they argue the parents are not necessarily the teachers and experts all family members can be both teachers and learners They suggest video games can help families form develop and sustain their learning culture as well as develop skills that are valued in the twenty first century workplace Educators and game designers should take note
