**Advanced Materials and Techniques for Biosensors and Bioanalytical Applications** Pranab Goswami,2020-11-01 Bioanalytical science and its technological subdomain biosensors are ever evolving subjects striving for rapid improvement in terms of performance and expanding the target range to meet the vast societal and market demands The key performance factors for a biosensor that drive the research are selectivity sensitivity response time accuracy and reproducibility with additional requirements of its portability and inexpensive nature These performance factors are largely governed by the materials and techniques being used in these bioanalytical platforms The selection of materials to meet these requirements is critical as their interaction or

involvement with the biological recognition elements should initiate or improve these performance factors. The technique discussed primarily applies to transducers involved in converting a biochemical signal to optical or electrical signals. Over the years the emergence of novel materials and techniques has drastically improved the performance of these bioanalytical systems enabling them to expand their analytical horizon. These advanced materials and techniques are central to modern bioanalytical and biosensor research. *Advanced Materials and Techniques for Biosensors and Bioanalytical Applications* provides a comprehensive review of the subject including a knowledge platform for both academics and researchers. Considering biosensors as a central theme to this book an outline on this subject with background principles has been included with a scope of extending the utility of the book to coursework in graduate and postgraduate schools.
