

## "Angles and More Angles Word Problems"

All of the following word problems deal with three different types of angles and turns. You'll need to know what a right angle, straight angle and complete turn equal in order to solve these. Read carefully as all the problems have two or more different angles in them:

1) I dropped a plate on the floor and saw that it made 5 complete turns and  $\frac{1}{2}$  of a right angle turn. How many degrees did this plate turn altogether?

2) My bored friend made 4 half-circle turns in the same direction to occupy himself. Then he turned 4 right angle turns in the opposite direction. At what degree did my friend end up?

3) While I was fixing my bike, I turned one of the wheels \_\_\_\_\_ turns in the same direction. Then I turned the same wheel 8 straight angle turns in the opposite direction. At what degree did the wheel end up?

4) My dog made 9 straight angle turns in the same direction chasing her tail. Then my dog turned  $3\frac{1}{2}$  complete turns in the opposite direction. At what degree did my dog end up?

5) My hamster made 23 right angle turns running in its wheel cage. Then it made \_\_\_\_\_ still going in the same direction. It turned around and ran 8 right angle turns in the opposite direction. Where did my hamster end up?

6) While listening to my music I spun one of my CDs \_\_\_\_\_ in the same direction. Then I turned the CD one more straight angle in the same direction and one more right angle going the same way. How many degrees did I turn my CD in all?
