Teaching Computing Unplugged in Primary Schools Helen Caldwell, Neil Smith, 2016-10-18 Teaching primary computing without computers. The Computing curriculum is a challenge for primary school teachers. The realities of primary school resources mean limited access to computer hardware. But computing is about more than computers. Important aspects of the fundamental principles and concepts of computer science can be taught without any hardware. Children can learn to analyse problems and computational terms and apply computational thinking to solve problems without turning on a computer. This book shows you how you can teach computing through unplugged activities. It provides lesson examples and everyday activities to help teachers and pupils explore computing concepts in a concrete way, accelerating their understanding and grasp of key ideas such as abstraction, logic, algorithms, and data representation. The unplugged approach is physical and collaborative, using kinaesthetic learning to help make computing concepts more meaningful and memorable. This book will help you to elevate your teaching and your children's learning of computing beyond the available hardware. It

focuses on the building blocks of understanding required for computation thinking The Literate Mind Andy Wells, 2017-09-16 Literacy is about 5 000 years old Since it was invented it has transformed human societies and knowledge fundamentally Indeed civilisation is built on literacy What is it about the process of making marks on paper or other surfaces that gives literacy this remarkable power The Literate Mind A Study of Its Scope and Limitations proposes that the evolved pre literate qualities of the human mind combined with the representational capacities of alphabets and other symbol systems provide uniquely powerful means for the generation and storage of knowledge The creation storage and sharing of texts augment the social and cognitive capacities of human minds and allow us to develop social institutions within which further new knowledge can be deployed and used Taking an approach that is equally applicable to print and digital media the book draws on evolutionary theory and the theory of computation to explain the remarkable power of literacy and its transformational effects on human society and knowledge It demonstrates that the universe of possible texts is infinite in extent and proposes that the combination of a reader and a text can be treated as an ecosystem of unlimited scope

Improving Learning Outcomes in Schools N. V. Varghese, Vrinda Sarup, Anuradha De, Amarjeet Sinha, 2025-10-20 What does quality education truly mean and how can we ensure it is accessible to all children regardless of their background This book delves into these pressing questions offering a comprehensive exploration of the challenges and opportunities within India's education system Why do millions of children in India attend school yet still struggle to acquire basic literacy and numeracy skills This book examines the varied reasons behind poor learning outcomes illustrating why high enrolment rates have not translated into meaningful educational progress It underscores the urgent need to shift the focus from merely getting children into schools to ensuring they learn and thrive Through real world case studies insightful policy analysis and a focus on innovative state and national initiatives the book unpacks what works in education and what does not From the role of teachers and school leadership to the importance of inclusive policies and community engagement it offers a holistic view of the factors influencing student achievement As a part of the Innovations Practice and the Future of Public Policy in India series this open access volume will interest policy professionals academics and researchers in education pedagogy curriculum design education economics and development studies This book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons CC BY NC ND 4.0 license
