Countering Cyber Sabotage Andrew A. Bochman, Sarah Freeman, 2021-01-19 *Countering Cyber Sabotage* Introducing Consequence Driven Cyber Informed Engineering CCE introduces a new methodology to help critical infrastructure owners operators and their security practitioners make demonstrable improvements in securing their most important functions and processes Current best practice approaches to cyber defense struggle to stop targeted attackers from creating potentially catastrophic results From a national security perspective it is not just the damage to the military the economy or essential critical infrastructure companies that is a concern It is the cumulative downstream effects from potential regional blackouts military mission kills transportation stoppages water delivery or treatment issues and so on CCE is a validation that engineering first principles can be applied to the most important cybersecurity challenges and in so doing protect organizations in ways current approaches do not The most pressing threat is cyber enabled sabotage and CCE begins with the assumption that well resourced adaptive adversaries are already in and have been for some time undetected and perhaps undetectable Chapter 1 recaps the current and near future states of digital technologies in critical infrastructure and the implications of our near total dependence on them Chapters 2 and 3 describe the origins of the methodology and set the stage for the more in depth examination that follows Chapter 4 describes how to prepare for an engagement and chapters 5 8 address each of the four phases The CCE phase chapters take the reader on a more granular walkthrough of the methodology with examples from the field phase objectives and the steps to take in each phase Concluding chapter 9 covers training options and looks towards a future where these concepts are scaled more broadly

Substation Automation Mladen Kezunovic, Mark G. Adamiak, Alexander P. Apostolov, 2010-07-16 The objective of the book is to fill a knowledge gap by covering the topic of substation automation by a team of authors with academic and industry backgrounds Understanding substation automation concepts and practical solutions requires knowledge in vastly diverse areas such as primary and secondary equipment computers communications fiber optic sensors signal processing and general information technology not generally taught in a power curricula but taught as independent subjects At the same time utility practice dictates how substation automation designs may be laid out and deployed To design such a system one also requires knowledge about existing standards for data exchange as well as test methods for evaluation of solutions This book is designed to meet the educational needs of undergraduate and graduate power majors as well as to serve as a reference to professionals who need to know about

substation automation because of fast changing technology expertise needed in their careers To meet the wide range of interests and needs the book covers diverse aspects of substation automation allowing instructors to select the best combination of chapters to meet their specific educational needs

Substation Automation Technologies and Advantages Scott Bricker,Turan Gönen,Lew Rubin,2001 *Fourth Annual Conference on Substation Automation* Texas A & M University,1998 *Modern Substation Automation and Protection Design* James Hadley,2002 Second Annual Conference on Substation Automation Texas A & M University,1996 **Substation Automation Handbook** Klaus-Peter Brand,Volker Lohmann,Wolfgang Wimmer,2003 **Fifth Annual Conference on Substation Automation** Texas A & M University,1999 **Third Annual Conference on Substation Automation** Texas A & M University,1997 Substation Automation Tutorial IEEE Power Engineering Society. Substations Committee. Data Acquisition, Processing, and Controls Systems Subcommittee,2004 This tutorial adopts a functional approach to the modern substation automation system The tutorial addresses what the electric utility operator need to know what are the various ways this information may be collected what techniques and procedures are available to control the electric network and how do all of these technologies inter relate Finally if the need exists to design purchase install and test a new modern system what are the requirements that ought to be considered Development of Substation Automation Guidelines for EDESUR, a Newly Formed Argentine Distributing Company Kenneth David Roth,1996 National SCADA Test Bed Substation Automation Evaluation Report ,2009 Increased awareness of the potential for cyber attack has recently resulted in improved cyber security practices associated with the electrical power grid However the level of practical understanding and deployment of cyber security practices has not been evenly applied across all business sectors Much of the focus has been centered on information technology business centers and control rooms This report explores the current level of substation automation communication and cyber security protection deployed in electrical substations throughout existing utilities in the United States This report documents the evaluation of substation automation implementation and associated vulnerabilities This evaluation used research conducted by Newton Evans Research Company for some of its observations and results The Newton Evans Report aided in the determination of what is the state of substation automation in North American electric utilities Idaho National Laboratory cyber security experts aided in the determination of what cyber vulnerabilities may pose a threat to electrical substations This report includes cyber vulnerabilities as well as recommended mitigations It also describes specific cyber issues found in typical substation automation configurations within the electric utility industry The evaluation report was performed over a 5 month period starting in October 2008 *An Integrative Approach to Reliability Analysis of an IEC 61850 Digital Substation* Yan Zhang,2013 In recent years reliability evaluation of substation automation systems has received a significant attention from the research community With the advent of the concept of smart grid there is a growing trend to integrate more computation and communication technology into power systems This thesis focuses on

the reliability evaluation of modern substation automation systems Such systems include both physical devices current carrying such as lines circuit breakers and transformers as well as cyber devices Ethernet switches intelligent electronic devices and cables and belong to a broader class of cyber physical systems We assume that the substation utilizes IEC 61850 standard which is a dominant standard for substation automation Focusing on IEC 61850 standard we discuss the failure modes and analyze their effects on the system We utilize reliability block diagrams for analyzing the reliability of substation components bay units and then use the state space approach to study the effects at the substation level Case study is based on an actual IEC 61850 substation automation system with different network topologies consideration concluded Our analysis provides a starting point for evaluating the reliability of the substation and the effects of substation failures to the rest of the power system By using the state space methods the steady state probability of each failure effects were calculated in different bay units These probabilities can be further used in the modeling of the composite power system to analyze the loss of load probabilities The electronic version of this dissertation is accessible from <http://hdl.handle.net/1969/1/148391>
