## Population dynamics

**Population dynamics**  
Introduction

**Understanding Population Dynamics**  
Population dynamics is the study of how and why the number of individuals in a population changes over time. It involves understanding the factors that influence birth rates, death rates, and migration.

**Birth Rates and Death Rates**  
Birth rates and death rates are key factors in population dynamics. Birth rates refer to the number of new individuals added to a population, while death rates refer to the number of individuals that die.

**Population Growth**  
Population growth occurs when the birth rate is higher than the death rate. This can lead to an increase in the size of a population over time.

**Population Decline**  
Population decline occurs when the death rate is higher than the birth rate. This can lead to a decrease in the size of a population over time.

**Population Stability**  
Population stability occurs when the birth rate and death rate are equal. This results in a population that remains the same size over time.
