1. **QUESTION** (10 marks)
A company is considering investing in a new machine. The machine will cost £10,000 and will have a useful life of 5 years. The machine will generate an annual cash flow of £2,000. The company's cost of capital is 10%.
2. **ANSWER** (10 marks)
To determine whether the investment is worthwhile, we need to calculate the Net Present Value (NPV) of the investment. The NPV is the sum of the present values of the cash flows, minus the initial investment.

1. **What is the purpose of the study?**
The purpose of the study is to investigate the effect of the new curriculum on the learning outcomes of the students in the field of biology.
2. **What is the research design?**
The research design is a quasi-experimental design, which involves comparing the learning outcomes of the students who were taught using the new curriculum with those of the students who were taught using the old curriculum.
3. **What are the variables in the study?**
The independent variable is the curriculum (new vs. old). The dependent variable is the learning outcomes (test scores).
4. **What are the hypotheses?**
The null hypothesis is that there is no significant difference in the learning outcomes of the students who were taught using the new curriculum and those who were taught using the old curriculum. The alternative hypothesis is that the learning outcomes of the students who were taught using the new curriculum are significantly higher than those of the students who were taught using the old curriculum.
5. **What are the data collection methods?**
The data collection method is a test that was administered to the students at the end of the semester.
6. **What are the results of the study?**
The results of the study show that the learning outcomes of the students who were taught using the new curriculum were significantly higher than those of the students who were taught using the old curriculum.
7. **What are the conclusions?**
The conclusion of the study is that the new curriculum has a positive effect on the learning outcomes of the students in the field of biology.
8. **What are the limitations of the study?**
The limitations of the study are that the sample size was small and the study was conducted in a single school.
9. **What are the recommendations for future research?**
The recommendation for future research is to conduct a larger study in multiple schools to confirm the findings of this study.

the 1990s, the number of people in the United States who are obese has increased by 50 percent. In 1990, 15 percent of the population was obese, but by 2000, that number had risen to 22 percent. And the numbers are projected to continue to rise. By 2010, 28 percent of the population is expected to be obese, and by 2020, that number is projected to reach 33 percent. The increase in obesity is not limited to the United States. In fact, it is a global phenomenon. In 1990, 10 percent of the world's population was obese, but by 2000, that number had risen to 15 percent. And the numbers are projected to continue to rise. 1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1. **Identify the problem.** The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring. For example, if a patient is experiencing chest pain, the problem could be a heart attack, a lung infection, or a musculoskeletal issue.

2. **Collect data.** The next step is to collect data. This involves gathering information about the patient's history, current symptoms, and any relevant test results. This data is used to narrow down the possible causes of the problem.

3. **Analyze the data.** The third step is to analyze the data. This involves comparing the collected information to known medical knowledge and patterns. This step helps to identify the most likely cause of the problem.

4. **Formulate a hypothesis.** The fourth step is to formulate a hypothesis. This is a tentative explanation for the problem, based on the analysis of the data. The hypothesis is then tested through further investigation.

5. **Implement a plan.** The fifth step is to implement a plan. This involves developing a treatment plan based on the hypothesis and the available evidence. The plan is then put into action, and the patient's response is monitored.

6. **Evaluate the outcome.** The final step is to evaluate the outcome. This involves assessing the patient's response to the treatment and determining whether the problem has been resolved. If not, the process may need to be repeated.

Abstract

QUESTION

1. Which of the following is a true statement regarding the relationship between the Federal Reserve and the Treasury Department?

A. The Federal Reserve is an independent agency of the Treasury Department.

B. The Federal Reserve is a separate entity from the Treasury Department.

C. The Federal Reserve is a part of the Treasury Department.

D. The Federal Reserve is a part of the Federal Reserve System.

ANSWER

B. The Federal Reserve is a separate entity from the Treasury Department.

EXPLANATION

The Federal Reserve is an independent agency of the United States government, established in 1913. It is not a part of the Treasury Department, although it is closely related to it. The Federal Reserve is responsible for conducting the nation's monetary policy, regulating the banking system, and maintaining the stability of the financial system. The Treasury Department is responsible for managing the government's finances, including collecting taxes and paying out government spending. The Federal Reserve and the Treasury Department work closely together to ensure the stability and health of the U.S. economy.
