The Health Psychology Reader David Marks, David F Marks, 2002-06-06 The advent of complex and powerful computer generated statistical models has greatly eroded the former prominence of social theory in data analysis replacing it with an emphasis on statistical technique To correct this trend Carol S Aneshensel presents a method for bringing data analysis and statistical technique into line with theory She approaches this task by first providing an overview that explains the connection between data analysis statistical technique and theory This section includes a description of the elaboration model for analyzing the empirical association between two variables by adding a third variable to the analysis Aneshensel then introduces a new concept into this model the focal relationship This concept is the one cause and effect type of relationship of primary significance that is indispensable to the entire theory Building upon the focal relationship as the cornerstone for all subsequent analysis two analytic strategies are developed to establish its internal validity An exclusionary strategy to eliminate alternative explanations for the focal relationship using control and other independent variables to rule out spuriousness and redundancy Resources in Education ,1988 **The Family and Public Policy** John J.
