Duffy, Norbert Streitz, Shin'ichi Konomi, Heidi Krömker, 2020-11-03 This book constitutes late breaking papers from the 22nd International Conference on Human Computer Interaction HCII 2020 which was held in July 2020 The conference was planned to take place in Copenhagen Denmark but had to change to a virtual conference mode due to the COVID 19 pandemic From a total of 6326 submissions a total of 1439 papers and 238 posters have been accepted for publication in the HCII 2020 proceedings before the conference took place In addition a total of 333 papers and 144 posters are included in the volumes of the proceedings published after the conference as Late Breaking Work papers and posters These contributions address the latest research and development efforts in the field and highlight the human aspects of design and use of computing systems The 42 late breaking papers presented in this volume were organized in topical sections as follows HCI in Automotive Interaction in Intelligent Environments and Digital Human Modeling and Ergonomics **Guideline for Building Services Design Inspired by the Cradle to Cradle Concept** Johannes Stiglmaier, Karsten Jurkait, 2020 The Cradle to Cradle C2C concept is a biomimetic approach that models human industry on nature s processes viewing materials as nutrients circulating in healthy and safe metabolisms It seeks to create systems that are not only efficient but also essentially waste free A growing number of building owners and developers are looking to implement it in their buildings be it to increase the productivity of their workforce or to provide a differentiator The C2C concept is reasonably covered in building construction however it is a rather uncharted area in building services making it difficult for MEP engineers to develop C2C inspired designs Arup set out to bridge this gap establishing how C2C inspired design would look like in the different MEP disciplines and researching which

systems products and materials are available in the market to meet the corresponding criteria The result is a comprehensive guideline that enables MEP engineers to develop a C2C inspired design It covers design criteria system selection system sizing design for deconstruction as well as material and product selection for the main MEP disciplines and sets out a number of criteria by which the aptness of a design for C2C can be measured **FPGA-Based Embedded System**

Todd Litman,2020-03-04 This book is a blueprint for developing an integrated parking plan It explains how to determine
parking supply and affect parking demand as well as how to calculate parking facility costs It also offers information about
shared parking parking maximums financial incentives tax reform pricing methods and other management techniques What
types of locations benefit from parking management Places with perceived parking problems Areas with rapidly expanding
population business activity or traffic Commercial districts and other places with compact land use patterns Urban areas in
need of redevelopment and infill Places with high levels of walking or public transit or places that want to encourage those
modes Districts where parking problems hinder economic development Areas with high land values Neighborhoods
concerned with equity including fairness to nondrivers Places with environmental concerns Unique landscapes or historic
districts in need of preservation *Enhanced Trustworthiness and End User Acceptance of Conditionally Automated
Vehicles in the Transition Period* Daniel Watzenig,Lisa-Marie Schicker,2020-12-08 A key factor for the introduction of

conditionally automated vehicles is a high level of trust in and acceptance of these vehicles by the end user To bring such so called TrustVehicles on the road the end users and their expectations have to be strongly taken into consideration by for instance developing driver interfaces as well as reliable and robust automated driving controllers The main topics of the book are ranging from the question of how these TrustVehicles should behave and interact with users the development of reliable sense plan act approaches the whole verification procedures starting with simulation to studies on the driving simulator and the verification on a test track All these steps together provide an overall picture and pave the way to trustworthy and reliable automated vehicles so called TrustVehicles
