Code of Practice for Project Management for Construction and Development CIOB (The Chartered Institute of Building), 2014-07-23. The first edition of the Code of Practice for Project Management for Construction and Development published in 1992 was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment. Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres.

Property Development Richard Reed, 2014-06-20. The 6th edition of this extremely popular and classic textbook has been updated to reflect ongoing changes in the field of property development. Attention is paid to the impact of the global financial crisis on the property development process and, in addition, to the increasing relevance of technology to the property profession. Whilst the successful style and format of the text has been retained, new chapters have been added and existing chapters updated and enhanced to guide lecturers and students in their teaching, reading and studying. Other new features in this edition include fully updated discussion points and reflective summaries, examples of contemporary best practice based on international case studies covering the UK, USA and Australia, new chapters on Property Cycles and Technology, online materials for lecturers and students. This fully revised edition of a standard text for all property development and real estate students will also be of interest to early career professionals and those pursuing similar professional degrees in the industry and in wider built environment courses.
