Cohen,Gennady Sh. Gildenblat,2014-12-01 VLSI Electronics Microstructure Science Volume 15 VLSI Metallization discusses the various issues and problems related to VLSI metallization It details the available solutions and presents emerging trends

This volume is comprised of 10 chapters. The two introductory chapters, Chapter 1 and 2, serve as general references for the electrical and metallurgical properties of thin conducting films. Subsequent chapters review the various aspects of VLSI metallization. The order of presentation has been chosen to follow the common processing sequence. In Chapter 3, some relevant metal deposition techniques are discussed. Chapter 4 presents the methods of VLSI lithography and etching. Conducting films are first deposited at the gate definition step; therefore, the issues related to gate metallization are discussed next in Chapter 5. In Chapter 6, contact metallization is elaborated, and Chapter 7 is devoted to multilevel metallization schemes. Long time reliability is the subject of Chapter 8, which discusses the issues of contact and interconnect electromigration. GaAs metallization is tackled in Chapter 9. The volume concludes with a general discussion of the functions of interconnect systems in VLSI. Materials scientists, processing and design engineers, and device physicists will find the book very useful.

This book focuses on optical fiber sensing and structural health monitoring technologies. It provides detailed information on the basic theory of F-P optical fiber sensors, fiber Bragg grating sensors, fiber laser grating sensors, and fully distributed optical fiber sensors. Drawing on the authors' research achievements and many years of practical experience in the field of engineering structure health monitoring, the book elaborates on the structural principle design and manufacture of optical fiber sensors and monitoring technologies and briefly describes advances made with regard to multiple engineering structures. **Fibre Optic Communication**

Herbert Venghaus, Norbert Grote, 2012-08-29. The book gives an in-depth description of the key devices of current and next generation fibre optic communication networks. In particular, the book covers devices such as semiconductor lasers, optical amplifiers, modulators, wavelength filters, and detectors, but the relevant properties of optical fibres as well. The presentations include the physical principles underlying the various devices, the technologies used for the realization of the different devices, typical performance characteristics and limitations, and development trends towards more advanced components are also illustrated. Thus, the scope of the book spans relevant principles, state of the art implementations, the status of current research, and expected future components. **Internal Photoemission Spectroscopy** Valeri V. Afanas'ev, 2010-07-07. The monographic book addresses the basics of the charge carrier photoemission from one solid to another, the internal photoemission (IPE) and different spectroscopic applications of this phenomenon to solid state.

heterojunctions This is the first book in the field of IPE which complements the conventional external photoemission spectroscopy by analysing interfaces separated from the sample surface by a layer of a different solid or liquid IPE is providing the most straightforward and therefore reliable information regarding the energy spectrum of electron states at interfaces At the same time the method provides the unique capability of analysing the heterostructures relevant to the modern micro and nano electronic devices as well as new materials involved in their design and fabrication In addition to the discussion of fundamental physical and technical aspects of IPE spectroscopic applications several hot topics are addressed These include development of new insulating materials for advances Si MOS technology both high k gate insulators and low k dielectrics for interconnect insulation metal gate materials development of heterostructures based on high mobility semiconductors etc Thanks to a considerable activity in this field over the last few years the recent results concerning band structure of most important interfaces involving novel materials can now be documented First complete description of the internal photoemission phenomena A practical guide to internal photoemission measurements Describes reliable energy barrier determination procedures Surveys trap spectroscopy methods applicable to thin insulating layers Provides an overview of the most recent results on band structure of high permittivity insulating materials and their interfaces Contains a complete collection of reference data on interface band alignment for wide bandgap insulating materials in contact with metals and semiconductors
