Defense Transportation: Algorithms, Models and Applications for the 21st Century Robert T. Brigantic, Jean Mahan, 2004-07-22. Defense Transportation Algorithms Models and Applications for the 21st Century contains papers divided into three general sections according to the title of this text: algorithms, models and applications. The first section on algorithms contains papers that are theoretical in nature or contain new techniques that relate to Defense Transportation System DTS processes. A sampling of the papers contained in this section deals with group theoretic tabu search techniques, shortest path, sailing distance algorithms and strategic airlift model validation methods. The second section contains papers on various transportation models used throughout the DoD and transportation industry as well as some newly developed transportation modelling methods that may eventually find their way into larger scale transportation models. A review of the major strategic mobility models is also contained in this section. The third section contains papers on various transportation applications that have been used to support various DTS studies and analyses. This section also contains a diverse set of topics with articles ranging from a paper on North Atlantic Treaty Organization NATO strategic lift requirements to an analysis paper on theater reception staging, onward movement and integration. Preface by General John W. Handy, Commander United States Transportation Command. Focus on land, sea and air transportation models and methods. Manuscripts written by analysts and researchers active in the field and directly supporting the United States Defense Transportation System. Research methods were instrumental in defining the in place DTS that so efficiently deployed forces for Operation Enduring Freedom and Operation Iraqi Freedom.

Principles and Practice of Constraint Programming - CP 2004 Mark Wallace, 2005-01-12 The 10th International Conference on the Principles and Practice of Constraint Programming CP 2003 was held in Toronto Canada during September 27 October 1 2004 Information about the conference can be found on the Web at <http://ai.uwaterloo.ca/cp2004> Constraint programming CP is about problem modelling problem solving programming optimization software engineering databases visualization user interfaces and anything to do with satisfying complex constraints It reaches into mathematics operations research artificial intelligence algorithms complexity modelling and programming languages and many aspects of computer science Moreover CP is never far from applications

and its successful use in industry and government goes hand in hand with the success of the CP research community. Constraint programming continues to be an exciting and growing research field as the annual CP conference proceedings amply witness. This year from 158 submissions we chose 46 to be published in full in the proceedings. Instead of selecting one overall best paper we picked out four distinguished papers though we were tempted to select at least 12 such papers. In addition we included 16 short papers in the proceedings; these were presented as posters at CP 2004. This volume includes summaries of the four invited talks of CP 2004. Two speakers from industry were invited. However these were no ordinary industrial representatives but two of the leading researchers in the CP community: Helmut Simonis of Parc Technologies until its recent takeover by Cisco Systems and Jean-François Puget, Director of Optimization Technology at ILOG. The other two invited speakers are also big movers and shakers in the research community: *Effective Surveillance for Homeland Security* by Francesco Flammini, Roberto Setola, and Giorgio Franceschetti, 2013-06-13. *Effective Surveillance for Homeland Security: Balancing Technology and Social Issues* provides a comprehensive survey of the state of the art methods and tools for the surveillance and protection of citizens and critical infrastructures against natural and deliberate threats. Focusing on current technological challenges involving multi-disciplinary problem analysis and systems engineering approaches, it provides an overview of the most relevant aspects of surveillance systems in the framework of homeland security. Addressing both advanced surveillance technologies and the related socio-ethical issues, the book consists of 21 chapters written by international experts from the various sectors of homeland security. Part I: Surveillance and Society focuses on the societal dimension of surveillance, stressing the importance of societal acceptability as a precondition to any surveillance system. Part II: Physical and Cyber Surveillance presents advanced technologies for surveillance. It considers developing technologies that are part of a framework whose aim is to move from a simple collection and storage of information toward proactive systems that are able to fuse several information sources to detect relevant events in their early incipient phase. Part III: Technologies for Homeland Security considers relevant applications of surveillance systems in the framework of homeland security. It presents real-world case studies of how innovative technologies can be used to effectively improve the security of sensitive areas without violating the rights of the people involved. Examining cutting-edge research topics, the book provides you with a comprehensive understanding of the technological, legislative, organizational, and management issues related to surveillance. With a specific focus on privacy, it presents innovative solutions to many of the issues that remain in the quest to balance security with the preservation of privacy that society demands.

Operations Research Proceedings 1996 Uwe Zimmermann, Ulrich Derigs, Wolfgang A. Gaul, Rolf H. Möhring, Karl-Peter Schuster, 2012-12-06. The volume contains a selection of manuscripts of lectures presented at the International Symposium on Operations Research SOR 96. The Symposium took place at the Technical University of Braunschweig, September 3-6, 1996. The Symposium had 527 participants from 32 countries around the world including 92 participants from Eastern Europe. The Symposium obviously attracts an international audience of workers fully covering the broad spectrum of Operations Research and related areas in economics, mathematics and computer science. The importance of a highly interdisciplinary field as Operations Research is increasing owing to the growth in applications in related disciplines. Technological advances in computer science and algorithmic mathematics are crucial for attacking the great challenges waiting in the areas of applications of Operations Research effectively. As a participant of SOR 96 one could well observe the current pace of achievements. Many of these results are in these proceedings. The program consisted of two plenary, 17 semi-plenary and 335 contributed lectures in 18 sections. *Subject Guide to Books in Print*, 1997. *Research and Development in Intelligent Systems XXIX* Max Bramer, Miltos Petridis, 2012-10-30.
