Quasi-Newton Methods for Nonlinear Programming Jason Dean Hibbeler,University of Illinois at Urbana-Champaign. Department of Computer Science,1997 Abstract In this thesis we examine nonlinear programming from the standpoint of nonlinear equations We consider Newton and quasi Newton algorithms for solving underdetermined nonlinear systems and then show how these techniques can be applied in the setting of constrained optimization We produce new perturbation analyses for the special symmetric block system resulting from a standard solution method in nonlinear programming Using the steepest descent method for unconstrained optimization we develop a new iteration for the constrained case We give a convergence analysis for this new method and illustrate its behavior with numerical examples Finally we propose a new class of symmetric updates for use in a quasi Newton method for nonlinear programming We show how these updates model the underlying nonlinear equation better than the standard symmetric updates and also how they require less overall work for large problems
