

## NURSE PRACTITIONER

For decades the leading nursing theorists, are trying to find a satisfactory definition of this profession. The basic question is whether it is - and if so, why - nursing specific in relation to other healthcare professions: on its own theoretical basis or only by the methods of applying a single theoretical foundation that links all other medical vocations? Or are they both? That is, if we look at the needs nurses' meet and the roles they make, as some authors do, the question arises, "Which human needs can the nurses successfully satisfy more than any other healthcare professional?" From the point of view of independence, competence, freedom of initiative, etc., it is questioning whether the nurse is independent and self-initiated and for what it is competent? For the physician is known to be "competent for diagnosis and treatment" and that it sometimes referred as his unique role. But what is the "unique role" of a nurse? Historically, nursing has emerged in the practice and tradition of nurturing the sick and wounded, and care for the helpless, abandoned poor, and not to underline some special expertise and methods. Only in recent times, from Florence Nightingale to the present day, the need for a certain vocational training of caregivers or nurses was imposed. Those who are engaged in it, often as motto quote her sentence as follows: "It is often said that each a woman can be a good nurse. I, on the other hand, consider that the basic elements of the health condition require knowledge". With the latest, little tendency of extending the nursing profession in the profession, the question of the specificity of nursing and their education in relation to other parental professions is opened. As a nurse to be, I feel like taking part of your college can prepare me and provide me with knowledge on important areas such as theoretical-methodological basis expert monopoly public awareness organization and ethics. It is that all occupations are based on particular theoretical knowledge and that everyone, especially those who want to acquire the status of a profession, strives to gain a monopoly over the practical use of their segment of theoretical knowledge. Medical professions, for example, are based on physiology, biology and chemistry, while on the other hand legal professions are based on Roman law

purposes and forms for writing and no single community's values superior to another's. Starting off with an examination of the core issue that WAC should be promoting learning to write in the disciplines instead of writing to learn, Waldo proposes housing WAC in comprehensive writing centers independent of any other department, using dialogue and inquiry rather than prescriptive techniques in the WAC program's interaction with faculty in other disciplines and phasing out writing assessment that depends on one test measuring the writing abilities of students from all disciplines. In the process of making his case, Waldo discusses tutor training, faculty consultancy, and multilayered assessment programs. In addition to presenting the theoretical and practical advantages of discipline-based WAC programs, he also offers clear and compelling evidence from his own institution that supports the success of this approach to writing instruction.

**Demythologizing Language Difference in the Academy: Establishing Discipline-Based Writing Programs** will be of interest to writing program and WAC administrators, writing center administrators, graduate students studying composition, and educators and graduate students involved in WAC initiatives.

Each chapter presents a key nursing theory or philosophy, showing how systematic theoretical evidence can enhance decision making, professionalism, and quality of care. Lead author Martha Raile Alligood is known nationally and internationally for her expertise in nursing theory. A classic in the field of nursing theory, this text uses objective critiques, case studies, and critical thinking activities to bridge the gap between nursing theory and application. Scholars specializing in the work of a specific nursing theorist write each theorist chapter, often having worked closely with the theorists to provide the most accurate and complete information. Case studies at the end of each theorist chapter put the theory into a larger perspective, demonstrating how it can be applied to practice. Critical thinking activities at the end of each theorist chapter help you understand the theory presented and apply it to personal and hypothetical situations. Diagrams and graphics help you to visualize and better understand abstract concepts and theories. History of nursing theory development includes its significance to the discipline and practice of the nursing profession. Brief summary sections in theorist chapters enhance comprehension and make it easier to review for tests. Major Concepts Definitions box in each theorist chapter outlines a theory's most significant ideas and clarifies vocabulary. Points for Further Study section at the end of each chapter indicates sources of additional information. References at the end of theorist chapters list the author's primary and secondary sources of information. NEW theorists, chapter authors, and case studies provide research and expertise from countries across the world. NEW references and bibliographies demonstrate the ever-increasing use of nursing theory globally.
