

Nervous System Study Guide

1. Identify the main function of the nervous system. **-To control the body's activities by relaying messages**
2. Identify the main divisions of the nervous system and list the body parts included in each division.
a) **central nervous system = brain and spinal cord**
b) **peripheral nervous system = nerves**
3. Label the main parts of the neuron (dendrites, cell body, nucleus, axon, axon tips).

4. List the function of each part of a neuron.
a) **dendrites—carry a nerve impulse to the cell body**
b) **cell body—contains the nucleus**
c) **nucleus—control center of the cell**
d) **axon—carry a nerve impulse away from the cell body**
e) **axon tips—release the nerve impulse**
5. Describe how two neurons are ~~always~~ joined. (_____ end to _____ end).
Neurons are always joined axon end to dendrite end.
6. Identify what a synapse is and how two joined neurons overcome a synapse.
A synapse is the gap between two neurons. The nerve impulse travels as an electrical impulse through the neuron. However, the nerve impulse becomes a chemical impulse as it travels across the synapse.
7. What is membrane potential?
Membrane potential is the electrical charge that exists on the membranes of every cell.

care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up to date clinical information. An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines a comprehensive multidisciplinary approach presenting the information is essential similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU and nursing care of the ICU patient.
