Collections at Risk Claire Derriks, 2017-02-01 Conflicts and wars and more specifically the 2011 Revolution in Egypt have brought to light the worrying question of the preservation of the cultural heritage in the world. The role of museums and international institutions have become ever more important in this respect. Recognizing that cultural treasures can form the basis for education and economic prosperity the organizers devoted the 29th Annual Meeting of ICOM's International Committee for Egyptology CIPEG to the theme of Collections at Risk: New Challenges in a New Environment. The present volume contains several of the papers read during those sessions in Brussels in 2012 and gives a clear example of the multifarious paths that lay open to obtaining the objective of preserving the past for the future.

The Arch of Titus Steven Fine, 2021-05-25 The Arch of Titus From Jerusalem to Rome and Back explores the shifting meanings and significance of the Arch of Titus from the Jewish War of 66-74 CE to the present for Romans, Christians and especially for Jews. Built by triumphant Romans this triumphal monument was preserved by medieval Christians lauded by modern visitors and dictators and imitated around the world. The Arch of Titus has special significance for the once defeated Jews. Its menorah is now the national symbol of modern Israel. The Arch of Titus From Jerusalem to Rome and Back assembles an international array of scholars to explore the Arch in all of its complexity. This volume celebrates an exhibition mounted at Yeshiva University Museum and is the final statement of the Yeshiva University Arch of Titus Project.

The Vertical City K. Al-Kodmany, 2018-06-25 Each century has its own unique approach toward addressing the problem of high density and the 21st century is no exception. As cities try to cope with rapid population growth adding 2.5 billion dwellers by 2050 and grapple with destructive sprawl politicians, planners and architects have become increasingly interested in the vertical city paradigm. Unfortunately cities all over the world are grossly unprepared for integrating tall buildings as these buildings may aggravate multidimensional sustainability challenges resulting in a vertical sprawl that could have worse consequences than horizontal sprawl. By using extensive data and numerous illustrations this book provides a comprehensive guide to the successful and sustainable integration of tall buildings into cities. A new crop of skyscrapers that employ passive design strategies, green technologies, energy saving systems and innovative renewable energy offers significant architectural improvements. At the urban scale the book argues that planners must integrate tall buildings with efficient mass transit, walkable neighbourhoods, cycling networks, vibrant mixed use activities, iconic transit stations, attractive plazas, well landscaped streets, spacious parks and engaging public art. Particularly it proposes the Tall Building and Transit Oriented Development (TB TOD) model as one of the sustainable options for large cities going forward. Building on the work of leaders in the fields of ecological and sustainable design this book will open readers' eyes to a wider range of possibilities for utilizing green, resilient, smart and sustainable features in architecture and urban planning projects. The 20 chapters offer

comprehensive reading for all those interested in the planning design and construction of sustainable cities
