After the Software Wars Keith Curtis, 2009 Computers are an advancement whose importance is comparable to the invention of the wheel or movable type While computers and the Internet have already changed many aspects of our lives we still live in the dark ages of computing because proprietary software is still the dominant model One might say that the richest alchemist who ever lived is my former boss Bill Gates Oracle founder Larry Ellison and Google co founders Sergey Brin and Larry Page are close behind Human knowledge increasingly exists in digital form so building new and better models requires the software to be improved People can only share ideas when they also share the software to display and modify them It is the expanded use of free software that will allow a greater ability for people to work together and increase the pace of progress This book will demonstrate that a system where anyone can edit share and review the body of work will lead not just to something that works but eventually to the best that the world can achieve With better cooperation among our scientists robot driven cars is just one of the many inventions that will arrive pervasive robotics artificial intelligence and much faster progress in biology all of which rely heavily on software Publisher

Computer Buyer's Guide and Handbook, 2000-07 *Applied Olfactory Cognition* Gesualdo M Zucco, Benoist Schaal, Mats Olsson, Ilona Croy, 2014-12-02 Foreword by Richard J Stevenson Macquarie University Australia It was long thought that the human nose might be able to discriminate somewhere in the order of 10 000 different odourants The recent finding that the human nose can discriminate something like a trillion different smells serves as yet another reminder that we have again underestimated the capacity of our sense of smell Bushdid Magnasco Vosshall Keller 2014 This volume serves as a further corrective for anyone who should hold the view that olfaction is unimportant in human affairs The papers presented in this ebook carefully collated and overseen by Aldo Zucco Benoist Schaal Mats Olsson and Ilona Croy showcase a large number of quite different reasons for studying the applied side of olfaction and indeed human olfaction in general The 23 contributions presented here cover a broad range of topics which illustrate contemporary interests in our field Although with a strong applied focus a noteworthy feature of this ebook is the richness of the theoretical perspectives that are developed These range from considerations of olfactory perception memory expertise and priming right the way through to receptor genetics These contributions from many leading experts in the field will surely shape much of the applied work linking olfaction to disease which is a further focus of this ebook In respect to health and disease the chapters on aging pregnancy depression alcohol dependency and environmental odours present overviews and rich new data on many contemporary problems to which the study of olfaction is now contributing A particularly notable aspect of olfactory experience is the affective impact that odours can have on people and their lives The ebook covers some particularly intriguing aspects of work in this area with empirical studies investigating dissociations between wanting and liking stress reduction in the elderly

mother infant bonding and the emotions that different odourants can evoke This affective line of work is nicely complemented by empirical studies on expertise the effect of odours on visual attention and the relationship between particular personality traits and interest in olfaction The gradual appropriation of methods from cognitive neuroscience into olfaction is also nicely represented in this ebook with at least three of the chapters reporting data using neuroimaging including a particular intriguing study looking at recognition of odours in mixtures Finally the close links between olfactory perception and sensory evaluation are also reflected in a chapter on wine I hope that readers of this e book will be struck as I have been in reading its various chapters how much olfaction affects our lives and how the study of this sense can enrich it
