math tutor Larry Zafran Students are justified in proclaiming that math is hard but there is a specific reason why they feel this way The author maintains that the struggle can be lessened by following the roadmap presented but it will take time and effort on the part of the student Since math is often not properly taught it is often not properly learned Anything that hasn't truly been learned regardless of subject is hard Once the various concepts are more secure and the student's gaps in understanding have been addressed math will have been made a bit easier as promised by the book's title However the book does not imply that learning math is fast fun or easy Most of the book's content is comprised of the roadmap of topics for a student to work through at his/her own pace Like all paths it begins at the beginning in this case starting with a review of basic arithmetic followed by basic operations negative numbers fractions decimals percents and basic probability and statistics This is the foundation of all math The space devoted to each topic is proportional to how difficult most students find the topic as well as how important the topic is in preparation for later math studies The material is explained conversationally and in plain English as promised by the book's subtitle without talking down to the reader and without the use of contrived examples or cartoonish illustrations The book concludes with a chapter on how to effectively study math and improve scores on exams Like the rest of the book the chapter takes a unique standpoint on the matter and offers suggestions which include how to get oneself into the proper mental and emotional mindset for being successful with math
