result the Mystory fosters critical awareness of the socio cultural instruments of creative inspiration and perspiration Reflexive in intent and experimental in approach David Prescott Steed s hybrid writing style moves freely between art historical biographical and autobiographical academic and speculative moods This book s emphasis on an electronic investigative sound based practice finds it treading new ground between the sonic arts and the field of electracy through its addition of sound and music to the genre this book extends the scope of studies into Ulmer s work beyond English literature and the ocularcentric arts offering a new handbook for sonic conceptual art practice

Deep Learning in Introductory Physics Mark J. Lattery, 2016-10-01 Deep Learning in Introductory Physics Exploratory Studies of Model Based Reasoning is concerned with the broad question of how students learn physics in a model centered classroom The diverse creative and sometimes unexpected ways students construct models and deal with intellectual conflict provide valuable insights into student learning and cast a new vision for physics teaching This book is the first publication in several years to thoroughly address the coherence versus fragmentation debate in science education and the first to advance and explore the hypothesis that deep science learning is regressive and revolutionary Deep Learning in Introductory Physics also contributes to a growing literature on the use of history and philosophy of science to confront difficult theoretical and practical issues in science teaching and addresses current international concern over the state of science education and appropriate standards for science teaching and learning The book is divided into three parts Part I introduces the framework agenda and educational context of the book An initial study of student modeling raises a number of questions about the nature and goals of physics education Part II presents the results of four exploratory case studies These studies reproduce the results of Part I with a more diverse sample of students under new conditions a public debate peer discussions and group interviews and with new research prompts model building software bridging tasks and elicitation strategies Part III significantly advances the emergent themes of Parts I and II through historical analysis and a review of physics education research

ENDORSEMENTS

In *Deep Learning in Introductory Physics* Lattery describes his extremely innovative course in which students ideas about motion are elicited evaluated with peers and revised through experiment and discussion The reader can see the students deep engagement in constructive scientific modeling while students deal with counter intuitive ideas about motion that challenged Galileo in many of the same ways Lattery captures students engaging in scientific thinking skills and building difficult conceptual understandings at the same time This is the double outcome that many science educators have been searching for The case studies provide inspiring examples of innovative course design student sensemaking and reasoning and deep conceptual change John Clement University of Massachusetts Amherst Scientific Reasoning Research Institute

Deep Learning in Introductory Physics is an extraordinary book and an important intellectual achievement in many senses It offers new perspectives on science education that will be of interest to practitioners to education researchers as well as to philosophers and historians of science Lattery combines insights into model based thinking with instructive examples from

the history of science such as Galileo's struggles with understanding accelerated motion to introduce new ways of teaching science. The book is based on first hand experiences with innovative teaching methods reporting student's ideas and discussions about motion as an illustration of how modeling and model building can help understanding science. Its lively descriptions of these experiences and its concise presentations of insights backed by a rich literature on education, cognitive science and the history and philosophy of science make it a great read for everybody interested in how models shape thinking processes. Dr J rgen Renn, Director, Max Planck Institute for the History of Science.

The Cygnus Key Andrew Collins, 2018-05-15. New evidence showing that the earliest origins of human culture, religion and technology derive from the lost world of the Denisovans. Explains how G bekli Tepe and the Giza pyramids are aligned with the constellation of Cygnus and show evidence of enhanced sound acoustic technology. Traces the origins of G bekli Tepe and the Giza pyramids to the Denisovans, a previously unknown human population remembered in myth as a race of giants. Shows how the ancient belief in Cygnus as the origin point for the human soul is as much as 45 000 years old and originally came from southern Siberia. Built at the end of the last ice age around 9600 BCE, G bekli Tepe in southeast Turkey was designed to align with the constellation of the celestial swan, Cygnus, a fact confirmed by the discovery at the site of a tiny bone plaque carved with the three key stars of Cygnus. Remarkably, the three main pyramids at Giza in Egypt, including the Great Pyramid, align with the same three stars. But where did this ancient veneration of Cygnus come from? Showing that Cygnus was once seen as a portal to the sky world, Andrew Collins reveals how at both sites the attention toward this star group is linked with sound acoustics and the use of musical intervals discovered thousands of years later by the Greek mathematician Pythagoras. Collins traces these ideas as well as early advances in human technology and cosmology back to the Altai-Baikal region of Russian Siberia where the cult of the swan flourished as much as 20 000 years ago. He shows how these concepts, including a complex numeric system based on long term eclipse cycles, are derived from an extinct human population known as the Denisovans. Not only were they of exceptional size, the ancient giants of myth, but archaeological discoveries show that this previously unrecognized human population achieved an advanced level of culture, including the use of high speed drilling techniques and the creation of musical instruments. The author explains how the stars of Cygnus coincided with the turning point of the heavens at the moment the Denisovan legacy was handed to the first human societies in southern Siberia 45 000 years ago, catalyzing beliefs in swan ancestry and an understanding of Cygnus as the source of cosmic creation. It also led to powerful ideas involving the Milky Way's Dark Rift viewed as the Path of Souls and the sky road shamans travel to reach the sky world. He explores how their sound technology and ancient cosmologies were carried into the West, flowering first at G bekli Tepe and then later in Egypt's Nile Valley. Collins shows how the ancient belief in Cygnus as the source of creation can also be found in many other cultures around the world, further confirming the role played by the Denisovan legacy in the genesis of human civilization.
