Theory Development in the Information Sciences Diane H. Sonnenwald, 2016-03-08 Emerging as a discipline in the first half of the twentieth century the information sciences study how people groups organizations and governments create share disseminate manage search access evaluate and protect information as well as how different technologies and policies can facilitate and constrain these activities Given the broad span of the information sciences it is perhaps not surprising that there is no consensus regarding its underlying theory the purposes of it the types of it or how one goes about developing new theories to talk about new research questions Diane H Sonnenwald and the contributors to this volume seek to shed light on these issues by sharing reflections on the theory development process These reflections are not meant to revolve around data collection and analysis rather they focus on the

struggles challenges successes and excitement of developing theories The particular theories that the contributors explore in their essays range widely from theories of literacy and reading to theories of design and digital search Several chapters engage with theories of the behavior of individuals and groups some deal with processes of evaluation others reflect on questions of design and the rest treat cultural and scientific heritage The ultimate goal Sonnenwald writes in her introduction is to encourage inspire and assist individuals striving to develop and or teach theory development Advances on Mechanics, Design Engineering and Manufacturing Benoit Eynard,Vincenzo Nigrelli,Salvatore Massimo Oliveri,Guillermo Peris-Fajarnes,Sergio Rizzuti,2016-09-02 This book gathers papers presented at the International Joint Conference on Mechanics Design Engineering and Advanced Manufacturing JCM 2016 held on 14 16 September 2016 in Catania Italy It reports on cutting edge topics in product design and manufacturing such as industrial methods for integrated product and process design innovative design and computer aided design Further topics covered include virtual simulation and reverse engineering additive manufacturing product manufacturing engineering methods in medicine and education representation techniques and nautical aeronautics and aerospace design and modeling The book is divided into eight main sections reflecting the focus and primary themes of the conference The contributions presented here will not only provide researchers engineers and experts in a range of industrial engineering subfields with extensive information to support their daily work they are also intended to stimulate new research directions advanced applications of the methods discussed and future interdisciplinary collaborations Understanding Social Signals: How Do We Recognize the Intentions of Others? Sebastian Loth,Jan P. De Ruiter,2016-05-30 Powerful and economic sensors such as high definition cameras and corresponding recognition software have become readily available e g for face and motion recognition However designing user interfaces for robots phones and computers that facilitate a seamless intuitive and apparently effortless communication as between humans is still highly challenging This has shifted the focus from developing ever faster and higher resolution sensors to interpreting available sensor data for understanding social signals and recognising users intentions Psychologists Ethnologists Linguists and Sociologists have investigated social behaviour in human human interaction But their findings are rarely applied in the human robot interaction domain Instead robot designers tend to rely on either proof of concept or machine learning based methods In proving the concept developers effectively demonstrate that users are able to adapt to robots deployed in the public space Typically an initial period of collecting human robot interaction data is used for identifying frequently occurring problems These are then addressed by adjusting the interaction policies on the basis of the collected data However the updated policies are strongly biased by the initial design of the robot and might not reflect natural spontaneous user behaviour In the machine learning approach learning algorithms are used for finding a mapping between the sensor data space and a hypothesised or estimated set of intentions However this brute force approach ignores the possibility that some signals or modalities are superfluous or even disruptive in intention recognition Furthermore this

method is very sensitive to peculiarities of the training data In sum both methods cannot reliably support natural interaction as they crucially depend on an accurate model of human intention recognition Therefore approaches to social robotics from engineers and computer scientists urgently have to be informed by studies of intention recognition in natural human human communication Combining the investigation of natural human behaviour and the design of computer and robot interfaces can significantly improve the usability of modern technology For example robots will be easier to use by a broad public if they can interpret the social signals that users spontaneously produce for conveying their intentions anyway By correctly identifying and even anticipating the user s intention the user will perceive that the system truly understands her his needs Vice versa if a robot produces socially appropriate signals it will be easier for its users to understand the robot s intentions Furthermore studying natural behaviour as a basis for controlling robots and other devices results in greater robustness responsiveness and approachability Thus we welcome submissions that a investigate how relevant social signals can be identified in human behaviour b investigate the meaning of social signals in a specific context or task c identify the minimal set of intentions for describing a context or task d demonstrate how insights from the analysis of social behaviour can improve a robot s capabilities or e demonstrate how a robot can make itself more understandable to the user by producing more human like social signals

Design Thinking Research Hasso Plattner, Christoph Meinel, Larry Leifer, 2016-08-26 This book summarizes the results of Design Thinking Research carried out at Stanford University in Palo Alto California USA and at the Hasso Plattner Institute in Potsdam Germany Offering readers a closer look at Design Thinking its innovation processes and methods the book covers topics ranging from how to design ideas methods and technologies to creativity experiments and wicked problem solutions to creative collaboration in the real world and the interplay of designers and engineers But the topics go beyond this in their detailed exploration of Design Thinking and its use in IT systems engineering fields or even from a management perspective The authors show how these methods and strategies actually work in companies introduce new technologies and their functions and demonstrate how Design Thinking can influence such unexpected topics as marriage Furthermore readers will learn how special purpose Design Thinking can be used to solve wicked problems in complex fields Thinking and devising innovations are fundamentally and inherently human activities so is Design Thinking Accordingly Design Thinking is not

merely the result of special courses nor of being gifted or trained it s a way of dealing with our environment and improving techniques technologies and life Masters of Mathematics Robert A. Nowlan,2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics *Computers Helping People with Special Needs* Klaus Miesenberger,Georgios Kouroupetroglou,2018-07-02 The two volume set LNCS 10896 and 10897 constitutes the refereed proceedings of the 16th International Conference on Computers Helping People with Special Needs ICCHP 2018 held in Linz Austria in July2018 The 101 revised full papers and 78 short papers presented were carefully reviewed and selected from 356 submissions The papers are organized in the following topical sections Web accessibility in the connected world accessibility and usability of mobile platforms for people with disabilities and elderly persons design development and engineering accessible system information document design accessible e learning e learning for accessibility AT personalized access to TV film theatre and music digital games accessibility accessibility and usability of self service terminals technologies and systems universal learning design motor and mobility disabilities AT HCI care empowerment of people with cognitive disabilities using digital technologies augmented and alternative communication AAC supported speech Art Karshmer lectures in access to mathematics science and engineering environmental sensing technologies for visual impairment 3D printing in the domain of assistive technologies AT and do it yourselves DIY AT tactile graphics and models for blind people and recognition of shapes by touch access to artworks and its mediation by and for visually impaired people digital navigation for people with visual impairments low vision and blindness human computer interaction future perspectives for aging well AAL tools products devices mobile healthcare and m health apps for people with disabilities and service and information provision Social Robotics Adriana Tapus,Elisabeth André,Jean-Claude Martin,François Ferland,Mehdi Ammi,2015-10-27 This book constitutes the refereed proceedings of the 7th International
