Aaron Durham

NORTH CAROLINA STATE UNIVERSITY

Major: Environmental Science

Academic Year: Senior

Short Biography: I am Aaron Durham and I am majoring in Environmental science with a minor in applied ecology and a focus on water quality. I love to spend time in the outdoors and look to be in that setting going into my professional career. I hope to be a water quality technician in the future and travel around gathering vital information to the safety and protection of natural water sources. I plan to do my part to save the resources the earth has provided so as to make better use of them and keep them around for further generations. I play videogames and spend time outdoors in my free time as well as read though not quite as much as I'd like. I love listening to music and spend probably too much money on headphones and speakers. I'm grateful for this opportunity and many others that have been provided to me through the Doris Duke Conservation Scholars Program and hope to spread some interesting information about Blue Crab habitats that you might not have known.

Presentation ID and Title: (84794) *Crabibat: Assessing the effective nursery habitat for juvenile blue crabs*

Ajisha Alwin – SEEDS Graduate Alumni Mentor

UNIVERSITY OF FLORIDA

Major: Microbiology

Academic Year: MS

Short Biography: Ajisha Alwin is a graduate student in Microbiology at the University of Florida. She currently works as a research assistant at the Karst Lab at the UF College of Medicine studying the norovirus. Her research interests are in viral/bacterial pathogenesis, infectious diseases, and disease ecology. Her passion for ecology started from my childhood in India and she has been involved in several conservation projects, rallies, and volunteer cleanups. As the Social Media-Webmaster and Marketing Officer of the ESA Student Section, her hope is to help students feel welcome think of new ways to increase the participation of the existing community for our activities. As students, we each have different things to offer and as part of a student network, her goal is to bring different interests and people together. Her interests are in research, education (particularly mentoring), and communication outreach.

A Short Guide to Writing about Biology Jan A. Pechenik, 2024-11-20 For almost four decades *A Short Guide to Writing About Biology* has been an indispensable resource. Noted biologist Jan Pechenik guides readers in acquiring the skills necessary to become critical thinkers and accomplished writers. Biology is a way of thinking about the world; it is also about communicating information accurately, logically, clearly, honestly, and concisely. The tenth edition outlines all aspects of writing well while also providing readers with procedures for developing strong research questions, logically explaining findings, and supporting claims with evidence. All good writing involves both a struggle for understanding and a struggle to express that understanding. The author delivers sage advice in an accessible, entertaining style to help readers learn to write compelling papers and to enhance their understanding. **OCR A Level Biology Student Book 1** Adrian Schmit, Richard Fosbery, Jenny Wakefield-Warren, 2015-06-26 Exam Board OCR Level A level Subject Biology First Teaching September 2015 First Exam June 2016 This is an OCR endorsed resource. Encourage students to learn independently and build on their knowledge with this textbook that leads students seamlessly from basic biological concepts to more complicated theories. Develop experimental, analytical, and evaluation skills with activities that introduce the practicals required by OCR and other experimental investigations in Biology. Provide assessment guidance with synoptic questions and multiple choice questions throughout the book and revision tips and skills all in one chapter. Strengthen understanding of key concepts with contemporary and engaging examples illustrated with accessible diagrams and images. Give students the opportunity to apply their knowledge and understanding of all aspects of practical work with Test Yourself Questions and Exam Practice Questions. Offer detailed guidance and examples of method with a dedicated Maths in Biology chapter and mathematical support throughout. Develop understanding with free online access to answers, an extended glossary, learning outcomes, and topic summaries. **OCR A Level Biology Student Book 1** includes AS Level **BioStats Basics** James L. Gould, Grant F. Gould, 2002 *BioStats Basics* provides introductory level biology students with a practical and accessible introduction to statistical research. Engaging and informal, the book avoids excessive theoretical and mathematical detail to focus on how core statistical methods are put to work in biology. Students learn the essentials in probability that enable skillful experiment design and the correct use of statistical tests. Everyday examples are drawn from ecology, animal physiology, animal behavior, medicine, and other areas of biology are used to clarify methods. The accompanying Web site www.whfreeman.com/gould is closely integrated with the text, providing crucial tutorials, explanations of tests, alongside simulations plus data analysis tools for completing the text's exercises. **Active Learning in College Science** Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of

exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

Assaraf,Marie-Christine P. J. Knippels,2022-05-25 This book synthesizes a wealth of international research on the critical topic of fostering understanding of complex systems in biology education Complex systems are prevalent in many scientific fields and at all scales from the micro scale of a single cell or molecule to complex systems at the macro scale such as ecosystems Understanding the complexity of natural systems can be extremely challenging though crucial for an adequate understanding of what they are and how they work The term systems thinking has become synonymous with developing a coherent understanding of complex biological processes and phenomena For researchers and educators alike understanding how students systems thinking develops is an essential prerequisite to develop and maintain pedagogical scaffolding that

facilitates students ability to fully understand the system s complexity To that end this book provides researchers and teachers with key insights from the current research community on how to support learners systems thinking in secondary and higher education Each chapter in the book elaborates on different theoretical and methodological frameworks pertaining to complexity in biology education and a variety of biological topics are included from genetics photosynthesis and the carbon cycle to ecology and climate change Specific attention is paid to design elements of computer based learning environments to understand complexity in biology education

The Oxford Handbook of Economics and Human Biology John Komlos,Inas Rashad Kelly,2016 The Oxford Handbook of Economics and Human Biology enhances understanding of how economic conditions influence human well being and how human health shapes such economic outcomes as wealth The volume contains cutting edge reviews from the major thought leaders in the field New insights are gained into economic history inequality and economic development

Handbook of Advanced Multilevel Analysis Joop Hox,J. Kyle Roberts,2011-01-11 This new handbook is the definitive resource on advanced topics related to multilevel analysis The editors assembled the top minds in the field to address the latest applications of multilevel modeling as well as the specific difficulties and methodological problems that are becoming more common as more complicated models are developed Each chapter features examples that use actual datasets These datasets as well as the code to run the models are available on the book s website <http://www.hlm-online.com> Each chapter includes an introduction that sets the stage for the material to come and a conclusion Divided into five sections the first provides a broad introduction to the field that serves as a framework for understanding the latter chapters Part 2 focuses on multilevel latent variable modeling including item response theory and mixture modeling Section 3 addresses models used for longitudinal data including growth curve and structural equation modeling Special estimation problems are examined in section 4 including the difficulties involved in estimating survival analysis Bayesian estimation bootstrapping multiple imputation and complicated models including generalized linear models optimal design in multilevel models and more The book s concluding section focuses on statistical design issues encountered when doing multilevel modeling including nested designs analyzing cross classified models and dyadic data analysis Intended for methodologists statisticians and researchers in a variety of fields including psychology education and the social and health sciences this handbook also serves as an excellent text for graduate and PhD level courses in multilevel modeling A basic knowledge of multilevel modeling is assumed
