Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can effectively reduce HR and increase EE in sedentary, middle-aged women.

 - 1. Turn off the lights at the end of the day.
 - 2. Avoid excessive light intensity, the length of the day and the light spectrum (the color of the light) are important.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the color of the light to be similar to the color of the sun at the end of the day. The producer should also be looking for the color of the light to be similar to the color of the sun at the end of the day.
