everyone working with this material *Die Design for Extrusion of Plastic Tubes and Pipes* Sushil Kainth, 2018 The Complete Technology Book on Plastic Extrusion, Moulding And Mould Designs NIIR Board of Consultants and Engineers, 2006-10-01

Plastics extrusion is a high volume manufacturing process in which raw plastic material is melted and formed into a continuous profile. Extrusion produces items such as pipe tubing, weather stripping, fence deck railing, window frames, adhesive tape, and wire insulation. There are fundamentally two different methods of extruding film, namely, blow extrusion and slit die extrusion. The design and operation of the extruder up to the die is the same for both methods. The moulding process is one of the most important plastic processing operations. It is an important commercial process whereby a resinous polymeric compound is converted into useful finished articles. The origin of this process dates back about a century to the invention of a plunger type machine. The mould has its own importance which gives the required shapes of the products. The vast growth of injection moulding is reflected dramatically in many types and sizes of equipment available today. Plastic moulding, especially thermoplastic items, may be produced by compression moulding methods, but since they are soft at the temperature involved, it is necessary to cool down the mould before they may be ejected. Injection moulding differs from compression moulding in that the plastic material is rendered fluid in a separate chamber or barrel outside the mould; it is then forced into the mould cavity by external pressure. Plastic technology is one of the most vigorous manufacturing branches, characterised by new raw materials, changing requirements, and continuous development in processing methods. The injection moulding machines manufacturers play an important part in the creation of injection moulding technology, process control, and essential mechanical engineering. Even though design is a specialized phase in the engineering field in tool and mould engineering, it is totally divided into two wings: as product design and tool and die design. This book basically deals with transport phenomena in polymer films, reinforcements for thermosets, miscellaneous thermoset processes, injection molding, blow molding, extrusion, basic principles of injection moulding, correct injection speed is necessary for filling the mould, plastic melt should not suffer degradation, the mould must be controlled for better quality product, logical consideration of moulding profile and material is important than standard setting, guide lines, economical setting of the machine, proper maintenance of machine, safety operations, preliminary checking for moulding material, component mould machine, injection moulding technique, the various types of injection moulding machines, specifications, platen mounting of moulds, locating spigots, mould clamping, etc. The book covers manufacturing processes of extruded and moulded products with the various mould designs. This is a very useful book for new entrepreneurs, technocrats, researchers, libraries, etc. TAGS: Plastics Extrusion, Plastic Extrusion Machines, Plastic Extrusion Process, Extrusion Moulding Process, Plastic Extrusion Plants, Industrial Plastic Extrusion, Plastic Extrusion Line, Plastic Moulding, Plastic Moulding Business, Products For Plastic Injection Moulding, Plastic Moulding Process, Injection Molding Process, Plastic Injection Molding Machines, Plastic Mould Design, Plastics Injection Mould Design, Injection Moulding Design Guide, Product Design for Plastic Moulding, Design for Injection Moulding.
